

## CONTENTS

Preface to the second edition	ix
Preface	xi
<b>1 Glass Formation</b>	<b>1</b>
1.1 General aspects	1
1.2 Glass formers	5
1.3 Atomistic hypotheses of glass formation	9
1.4 Kinetic approach to glass formation	13
<b>2 Phase Transformation in Glass</b>	<b>16</b>
2.1 Crystallization	17
2.2 Liquid – liquid phase separation	19
2.3 Glass-ceramics	41
<b>3 Glass Formation by the Sol-gel process (I. Strawbridge)</b>	<b>51</b>
3.1 Introduction	51
3.2 General chemistry	52
3.3 Sol-gel processing	55
3.4 Applications	77
3.5 Conclusions	82
<b>4 Physical properties</b>	<b>86</b>
4.1 Density of glasses	86
4.2 Partial molar volume of constituent oxide in glasses and melts	91
4.3 Refractive index of glasses	98
4.4 Thermal expansion of glasses	102
4.5 Viscosity of glasses	111
4.6 Surface tension of glasses	120
4.7 Electrical properties of glasses	124
4.8 Strength of glasses (A. K. Varshneya)	140
<b>5 Batch Melting Reactions (P. Hrma)</b>	<b>157</b>
5.1 Introduction	157
5.2 Experimental techniques	158
5.3 First stage of melting	158
5.4 Second stage of melting	163
5.5 Third stage of Melting	175

<b>6</b>	<b>Chemical Durability of Glass</b>	<b>179</b>
6.1	Mechanism of reactions of glasses with aqueous solution	180
6.2	Factors affecting chemical durability measurements of a glass	184
6.3	Effects of glass composition	188
6.4	Effect of pH of the solution on chemical durability of glass	191
6.5	Solubility of silica in aqueous solution	196
6.6	Glass electrodes	210
<b>7</b>	<b>Oxidation – Reduction Equilibrium in Glass</b>	<b>219</b>
7.1	General	219
7.2	Activity corrections	226
7.3	Oxidation-reduction in glass	228
7.4	Theory of redox reactions in solutions	239
<b>8.</b>	<b>Acid – Base Concepts in Glass</b>	<b>246</b>
8.1	Introduction	246
8.2	Acid – base relationships in glasses	248
8.3	Oxygen ion activity	250
8.4	Transition metal ions as acid – base indicators in glass	255
8.5	Oxidation – reduction equilibrium in glass	268
8.6	Filled shell ions with ns <sup>2</sup> configuration as acid – base indicator in glass	270
8.7	Vanadyl ion as an acid – base indicator in glass	272
<b>9</b>	<b>Colour Classes</b>	<b>276</b>
9.1	Atomic structure and the periodic classification of transition metals	276
9.2	Theories of chemical bonding in transition metal complexes	277
9.3	Application of bonding theories in interpreting d – d absorption spectra	300
9.4	Absorption spectra of transition metal ions	305
9.5	Charge-transfer bands	315
9.6	Anionic substitution in glass	323
9.7	Photosensitive glasses	331
9.8	Copper ruby glasses	336
9.9	Measurement of colour, colour diagram and tristimulus values	342
<b>10</b>	<b>Polymeric Nature of Glass Melts</b>	<b>349</b>
	Index	365
