

## CONTENTS

|  |     |
|--|-----|
| Preface to Earlier Editions                                  | ix  |
| Preface to This Edition                                      | xi  |
| 1 The Glass State  | 1   |
| 2 Elementary Chemistry for Glassmaking                       | 7   |
| 3 Periodic Table, Valence, Structure of Atoms                | 17  |
| 4 The Glass-Making Oxides and the Structure of Glass         | 24  |
| 5 Glass Composition and Crystalline Phases                   | 42  |
| 6 Chemical Composition of Glass                              | 62  |
| 7 Raw Materials  | 93  |
| 8 Batches and Calculations                                   | 116 |
| 9 Handling and Mixing Raw materials                          | 126 |
| 10 Combustion and Fuels                                      | 137 |
| 11 Furnaces  | 157 |
| 12 Viscosity   | 187 |
| 13 Melting   | 205 |
| 14 The Principles of Glassworking                            | 225 |
| 15 Mechanical Glassworking                                   | 238 |
| 16 Strain and Annealing                                      | 273 |
| 17 Color   | 289 |
| 18 Decorative Processes and Surface Coatings                 | 332 |
| 19 The Mechanical Properties of Glass                        | 343 |
| 20 Other Physical Properties                                 | 379 |
| 21 Weathering and Durability                                 | 407 |
| 22 Optical Glass   | 417 |
| 23 Defects and Testing of Glassware                          | 436 |
| 24 Glasshouse Refractories                                   | 456 |
| Appendix – The Laws of Energy and Equilibrium in Glass Melts | 473 |
| Index  | 489 |
