666.13 KOR

CONTENTS

PREFACE 7

CHAPTER ONE

Morphology of silicate glass surfaces 9

A) Investigation techniques of the morphologic properties 9

1. Profilography 9
2. Method of recognizing surface morphology, and discontinuities (breaks, cracks) 10

B) Morphologic changes on break surfaces; the effect of grinding and polishing 13

C) Morphologic changes due to chemical and moisture effects 15

D) Morphology of break surfaces of coloured and opal glass 18

CHAPTER TWO

Surface hardness of silicate glass 19

CHAPTER THREE

Sorption characteristics of silicate glass surfaces 29

A) Sorption theories 29

B) Desorption and adsorption of liquids and their vapours 31

C) Adsorption of metals, metal salts and metal ions 39

D) Gas sorption properties 47

CHAPTER FOUR

Wetting and adhesion of silicate glass surfaces 55

A) Wetting properties of glass surfaces 55

1. Contact properties of oxide glass 55
2. Wetting characteristics of hydrogen glass 56
3. Contact properties of treated glass surfaces 59
4. Heat of wetting of glass surfaces 60

B) Glass surfaces adhesion phenomena 62

1. Glass-to-glass adhesion 62
2. Adhesion of foreign materials upon glass surface 64

CHAPTER FIVE

Electric conductivity of silicate glass surfaces 70

CHAPTER SIX

Interaction between silicate glass surface and electrons 75

CHAPTER SEVEN

Dealkalization of lime alkali silicate glass surfaces 80

A) The migration of alkali ions towards the surface 80

B) Reaction of alkali oxides with gases on glass surfaces 83

C) The influence of liquids and solids on glass surfaces and on their alkali oxide contents 86
