Foreword	ix
Preface	xi
Acknowledgments	xiii

BATCHING AND FORMING

Long Term Results of Oxy Fuel Forehearth Heating Technology for E-Glass Fibers Christian Windhoevel, Chendhil Periasamy, George Todd, Justin Wang, Bertrand Leroux, and Youssef Joumani	3
Glass Production Losses Originating from Contaminants in Cullet and Raw Materials J. Terry Fisk	15
Developing a Better Understanding of Boron Emissions from Industrial Glass Furnaces Andrew Zamurs, Tim Batson, David Lever, Simon Cook, and Suresh Donthu	25
New Developments of Batch Briquetting Khaled Al Hamdan, Heiko Hessenkemper, and Sven Wiltzsch	33
Application of Self-Supporting Precious Metal Stirrers in the Melting of Soda-Lime Glass Alexander Fuchs	43

GLASS MELTING

Application of an Energy Balance Model for Improving the Energy Efficiency of Glass Melting Furnaces Adriaan Lankhorst, Luuk Thielen, Johan van der Dennen, and Miriam del Hoyo Arroyo	53
---	----

Observation of Batch Melting and Glass Melt Fining and Evolved Gas Analysis	69
Penny Marson, Ruud Beerkens, and Mathi Rongen	

Thermochemical Recuperation to Increase Glass Furnace Energy Efficiency	81
David Rue, Aleksandr Kozlov, Mark Khinkis, and Harry Kurek	

Dry Batch Optimizer—Gain All Benefits of Water-Wetting While Reducing the Drawbacks	93
F. Philip Yu, Tom Hughes, and Blaine Krause	

MODELING, SENSING, AND CONTROL

In-Situ CO and O ₂ Laser Sensor for Burner Control in Glass Furnaces	103
A.J. Faber, M. van Kersbergen, and H. van Limpt	

Radiation Impact on the Two-Dimensional Modeling of Glass Sheet Sagging and Tempering	109
Dominique Lochegnies, Fabien Béchet, Norbert Siedow, and Philippe Moreau	

An Advanced Expert Control System and Batch Imaging Software for an Improved Automatic Melter Operation	117
H.P.H. (Erik) Muijsenberg, Robert Bodi, Menno Eisenga, and Glenn Neff	

How Can Predictive Strategies Contribute to Improved Power Management and Decreased Energy Consumption?	133
Rene Meuleman	

How Many Chambers are Enough?—A Float Furnace Modeling Study	141
Matthias Lindig	

Two-Dimensional Modeling of the Entire Glass Sheet Forming Process, Including Radiative Effects	147
Fabien Béchet, Norbert Siedow, and Dominique Lochegnies	

REFRACTORIES I

Hot Bottom Repairs: Global Impact, Performance Case Study and Development for the Americas	165
S. Cristina Sánchez Franco, Kevin Pendleton, Dennis Cawthorn, and Bryn Snow	

Process Improvements with Bonded Alumina Channels	177
Elmer Sperry and Laura Lowe	

Bonded Refractories for Extreme Conditions in the Top of Regenerators	189
Rongxing Bei, Klaus Santowski, Christian Majcenovic, Goetz Heilemann, and Mathew Wheeler	
New Fused Cast Refractory for Metal Line Protection	197
Olivier Bories, Isabelle Cabodi, Michel Gaubil, and Bruno Malphettes	
Ancorro—Refinement Technology for Refractory in Glass Melt Contact	203
Rolf Weigand, Heiko Hessenkemper, Anne-Katrin Rössel, David Tritschel, and Romy Kühne	
 REFRACTORIES II	
An Update on the Technological Evolution (Or Lack Thereof) of Chinese Manufacturers of Fused Cast Refractories and the Value vs. Cost Proposition	211
P. Carlo Ratto	
Monolithic Crown and Its Benefits, Colloidal Silica Bonded Refractories Technology	217
Ali Farhadi, Tom Fisher, Alonso Gonzalez Rodriguez, and Mario Estrada	
High Emissivity Coatings in Glass Furnaces	225
Tom Kleeb and Bill Fausey	
New Recycling Solution for Refractories from Insulation Glass Furnaces	233
O. Citti, C. Linnot, T. Champion, and P. Lenfant	
Furnace Repair after a Hurricane Flooding at Monterrey, Mexico	245
Roberto Cabrera	
Author Index	251
