Foreword	<i>XIII</i>
Preface to the Second Edition	<i>XV</i>
Preface to the First Edition	<i>XVII</i>
Symbols and Definitions (Units in Parentheses)	<i>XIX</i>
Physical Constants	<i>XXV</i>
List of Abbreviations	<i>XXVII</i>

1	Introduction	<i>1</i>
2	Glass, A Ceramic Material	<i>5</i>
2.1	Four Classes of Materials	<i>5</i>
2.2	Materials Properties	<i>11</i>
2.3	Selecting Materials	<i>14</i>
2.4	Performance Indices	<i>16</i>
2.5	Shape Factors in Mechanical Design	<i>19</i>
3	Glass Prehistory and History	<i>25</i>
3.1	Natural Glasses	<i>25</i>
3.2	Early Glasses	<i>29</i>
3.3	First Optical Glasses	<i>33</i>
3.4	Modern Glasses	<i>34</i>
3.4.1	Soda–Lime–Silica Glasses	<i>34</i>
3.4.2	Borosilicate and Aluminosilicate Glasses	<i>40</i>
4	Applications of Glass	<i>41</i>
4.1	Glazing	<i>41</i>
4.2	Containers	<i>47</i>
4.3	Optical Glass	<i>49</i>
4.4	Glass Fibres for Insulation and Reinforcement	<i>50</i>
4.5	Abrasive Tools	<i>52</i>
4.6	Glass Manufacturers	<i>54</i>

5	Glass Structure	55
5.1	Introduction	55
5.2	Silica Glass and Related Glasses	56
5.2.1	Glass Network	56
5.2.2	Glass Network Modification	59
5.2.3	Short-Range Order	62
5.3	Borate Glass and Related Glasses	65
5.4	Organic and Chalcogenide Glasses	66
5.5	Metallic Glasses	67
5.6	Avoiding Crystallization	68
5.6.1	Nucleation and Growth of Crystallized Phases	68
5.6.2	Nucleation of Crystallized Phases	69
5.6.2.1	Homogeneous Nucleation	70
5.6.2.2	Heterogeneous Nucleation	72
5.6.3	Crystal Growth	74
5.6.4	Temperature–Time–Transformation (TTT) Diagram	76
5.6.5	Devitrification	77
5.6.6	Factors That Favour Glass Formation	78
5.7	Vitroceramic Fabrication	78
5.7.1	Introduction	78
5.7.2	Conventional Method (Two Stages)	79
5.7.3	Modified Conventional Method (Single Stage)	80
5.7.4	Laser-Induced Method	80
5.8	Glass Surface	80
5.8.1	Surface Reaction	81
5.8.2	Molecular Diffusion	81
5.8.3	Glass Network Interaction with Water	82
5.8.3.1	Water Reaction	82
5.8.3.2	Ion Exchange	82
5.8.3.3	Glass Corrosion	83
5.8.4	Surface Properties	84
6	Glass Rheology	85
6.1	Viscosity	85
6.1.1	Viscosity and Process	85
6.1.2	Viscosity Measurement	88
6.1.2.1	Rotation Viscometer	89
6.1.2.2	Falling Sphere Viscometer	90
6.1.2.3	Fibre Elongation Viscometer	91
6.1.3	Viscosity Variation with Temperature	92
6.1.3.1	Introduction	92
6.1.3.2	Fragility	95
6.1.3.3	VFT Empirical Formula	96
6.1.3.4	Microscopic Approach	97
6.2	Glass Transition and Its Observation	101

- 6.2.1 'Observing' the Glass Transition 101
- 6.2.2 Dilatometry 103
- 6.2.3 Differential Scanning Calorimetry 105
- 6.3 Viscous Response of Glass 107
- 6.4 Viscoelastic Response of Glass 109
 - 6.4.1 Introduction 109
 - 6.4.2 Maxwell and Kelvin Solids 109
 - 6.4.3 Dynamic Mechanical Analysis 111
 - 6.4.4 Modelling Real Solids 115
 - 6.4.5 Functional Formulation 116
 - 6.4.5.1 Creep 116
 - 6.4.5.2 Stress Relaxation 117
 - 6.4.5.3 Elastic-Viscoelastic Correspondence 118
 - 6.4.5.4 Superposition Principle (Simple Thermo-rheological Behaviour) 119
- 6.5 Thermal Tempering of Glass 121
 - 6.5.1 Introduction 121
 - 6.5.2 Freezing Theory 123
 - 6.5.3 Stress Relaxation 125
 - 6.5.4 Structural Relaxation 126
- 6.6 Transient Stresses 131
- 6.7 Chemical Tempering of Glass 133
 - 6.7.1 Introduction 133
 - 6.7.2 Ion Exchange and Stress Build-Up 134
 - 6.7.3 Stress Relaxation 135
 - 6.7.4 Engineered Stress Profile Glasses 135
- 7 Mechanical Strength of Glass 139**
 - 7.1 Theoretical Strength 139
 - 7.2 Tensile Resistance of Glass 140
 - 7.3 Stress Concentration and Griffith Energy Balance 147
 - 7.3.1 Stress Concentration 147
 - 7.3.2 Energy Balance 148
 - 7.4 Linear Elasticity Crack Tip Stress Field 149
 - 7.5 SIF under Non-uniform Stress 151
 - 7.6 Toughness Measurement 151
 - 7.6.1 Compact Tension 152
 - 7.6.2 Notch Beam Test 152
 - 7.6.3 Double Torsion 153
 - 7.7 Influence of Residual Stress on Strength and Fragmentation 153
 - 7.7.1 Influence of Residual Thermal Stress on Strength 154
 - 7.7.2 Influence of Residual Chemical Stress on Strength 154
 - 7.7.3 Influence of Residual Stress on Fragmentation 156
 - 7.7.4 Impact-Induced Fracture 157

- 7.8 Statistical Weibull Analysis 158
 - 7.8.1 Introduction 158
 - 7.8.2 Functional Formulation 158
 - 7.8.2.1 Uniform Tensile Stress 160
 - 7.8.2.2 Non-uniform Tensile Stress 160
 - 7.8.3 Population of Flaws 161

- 8 Contact Resistance of Glass 165**
 - 8.1 Sharp and Blunt Contact 165
 - 8.1.1 Introduction 165
 - 8.1.2 Spherical Indentation 166
 - 8.1.2.1 Elastic Loading 166
 - 8.1.2.2 Hertz Fracture and Indentation Toughness 168
 - 8.1.3 Sharp Indentation 172
 - 8.1.3.1 Elastic Loading 172
 - 8.1.3.2 Elastic–Plastic Loading 173
 - 8.1.3.3 Hardness 174
 - 8.1.3.4 Radial–Median Cracking 179
 - 8.1.3.5 Indentation Toughness 182
 - 8.1.3.6 Lateral Cracking and Chipping 184
 - 8.1.3.7 Brittleness Index 184
 - 8.2 Sharp Contact Resistance 185
 - 8.3 Scratch Resistance 189
 - 8.4 Abrasion Resistance 191
 - 8.5 Introducing a Controlled and Critical Surface Flaw 193
 - 8.6 Cutting and Drilling of Glass 194

- 9 Ageing of Glass 199**
 - 9.1 Fatigue in Glass 199
 - 9.1.1 Static Fatigue 199
 - 9.1.2 Testing Methods 199
 - 9.2 Stress Corrosion 200
 - 9.2.1 Introduction (Domain III) 200
 - 9.2.2 Domains O and I: Reaction Controlled 201
 - 9.2.3 Domain II: Transport Controlled 203
 - 9.3 Charles and Hillig Theory 203
 - 9.4 Lifetime under Static Fatigue 205
 - 9.5 Applications 207
 - 9.6 NiS Phase Transformation 208
 - 9.7 Crack Healing 210

- 10 Mechanics of Glass Processes 211**
 - 10.1 Introduction 211
 - 10.1.1 Batching 212
 - 10.1.2 Melting 213

10.1.3	Finishing	214
10.1.4	Forming	216
10.2	Float Process	216
10.3	Fusion Draw	221
10.4	Container Process	222
10.4.1	Pressing	223
10.4.2	Press-and-Blow, Blow-and-Blow Processes	225
10.5	Fibre Process	228
10.5.1	Tensile Drawing	228
10.5.2	Centrifugal Drawing	230
11	Production Control of Residual Stresses	235
11.1	Introduction	235
11.2	Residual Stresses in Flat Glass	236
11.3	Basics of Photoelasticity in Flat Glass	237
11.4	Stress Meters	241
11.4.1	Edge Stress Meters	241
11.4.2	Surface Stress Meters	243
12	High-Tech Products and R&D	247
12.1	Market Trend-Driven R&D	247
12.2	Flat Displays	248
12.2.1	Liquid Crystal Displays	249
12.2.2	Plasma Display Panels	250
12.2.3	Glass Stability	250
12.2.4	Glass Shock and Damage Resistances	252
12.3	Thin-Film Technology	253
12.3.1	Chemical Vapour Deposition	256
12.3.2	Physical Vapour Deposition	258
12.3.3	Sol-Gel Routes	263
12.4	Residual Stresses in Thin Films	266
12.5	Summary	268
13	Conclusion	271
Appendix A: Light Absorption, Dispersion and Polarization 273		
A.1	Electromagnetic Spectrum	273
A.2	Light Absorption	273
A.3	Light Dispersion	275
A.4	Light Polarization	275
Appendix B: Atomic Structure and Bond Formation 279		
B.1	Atomic Structure	279
B.2	Mendeleev Table	281
B.3	Bond Formation	282

Appendix C: Thermal Expansion and Elasticity 285

- C.1 The α - E Trend 285
- C.2 Qualitative Approach 285
- C.3 Expansion Modelling 286
- C.4 Differential Expansion Measurement 287

Appendix D: Falling Sphere Viscometer and Fining of Glass 289

- D.1 Falling Sphere 289
 - D.1.1 Asymptotic Regime 289
 - D.1.2 Transient Regime 290
 - D.1.3 Faxen's Side Correction 291
- D.2 Fining of Glass 291

Appendix E: Theoretical Strength of a Solid 293**Appendix F: Weibull Analysis 297****Appendix G: Photoelastic Set-Up for Lectures 301**

- G.1 Set-Up for Photoelastic Projection 301
- G.2 Example of a Beam under Flexion (Transient Stresses) 301
- G.3 Example of Tempered Specimens (Residual Stresses) 302

Appendix H: Instrumented Nanoindentation Applied to Thin Films 305

- H.1 Instrumented Nanoindentation 305
- H.2 Indentation Strain Field 309
- H.3 Hardness, Yield Stress and Representative Flow Stress 310
- H.4 Coating-Substrate Composite Response 314
- H.5 Time-Dependent Response 316
 - H.5.1 Viscoelastic Indentation Curves 317
 - H.5.2 Viscous Elastic-Plastic Indentation $F(h)$ Curves 318
- H.6 Elastic-Plastic Ratios 321

Appendix I: Strain and Stress 323

- I.1 Stress and Strain 323
- I.2 Stress and Strain Tensors 325
- I.3 Uniaxial Tensile Test 326
- I.4 Simple Shear 327
- I.5 Plane Stress 328
- I.6 Hydrostatic Pressure and Stress Deviator 329
- I.7 Generalized Hooke's Law 329
- I.8 Kelvin and Maxwell Models 330
- I.9 Generalized Maxwell Model 331

Appendix J: Flow and Plasticity in Glass 333

- J.1 Introduction 333
- J.2 From Newtonian to Non-Newtonian Flow 334
- J.3 From Homogeneous to Heterogeneous Flow 338

Appendix K: Finite Element Analysis 343

- K.1 FEM of the Pressing of a Parison 343
- K.2 FEM of the Precision Moulding of a Glass Lens 343
- K.3 FEM of Fracture 344
- K.4 FEM of Contact Loading 346

Appendix L: X-Ray Diffraction Analysis of Thin-Film Residual Stresses 349

- L.1 Thin-Film Stress and Strain 349
- L.2 X-Ray Diffraction Method 351
- L.3 The $e-\sin^2 \psi$ Method 352

Appendix M: Diffusion 355

- M.1 Diffusion Laws 355
- M.2 Steady-State Diffusion 360
- M.3 Non-Steady-State Diffusion 361

Glossary 365**References** 367**Index** 383
