

**CONTENTS**

PREFACE	iii
<b>CHAPTER I</b>	
<b>FIREBRICKS AND BLOCKS</b>	1
Refractoriness – Seger cones – Fireclay bricks – Grog bricks – Flint –clay bricks – Silica bricks – Semi-silica bricks – Asbestos bricks – Kieselguhr bricks – Highly aluminous bricks – Magnesia bricks – Dolomite bricks – Chromite bricks – Iron ore bricks – Titanic oxide bricks – Carbon bricks – Carbide bricks – Zirconia bricks – Blocks and “shapes”	
<b>CHAPTER II</b>	
<b>REFRACTORY HOLLOW-WARE</b>	61
Crucibles – Glasshouse pots – Saggars – Retorts – Muffles – Ladles – Pipes, Nozzles and Channels – Sundry refractory articles	
<b>CHAPTER III</b>	
<b>RAW REFRACTORY MATERIALS</b>	78
Fireclays – Silica – Fused silica – Bauxite – Zirconia and zircon – Magnesite – Dolomite – Chromite – Graphite – Coke, Lampblack and Charcola – carbides	
<b>CHAPTER IV</b>	
<b>SHAPING THE WARE</b>	113
Consistency of paste – Hand –moulding – Machine-pressing – Repressing – Extrusion – Jollying and jiggering – Throwing – Hand –modelling – casting – Glass-working methods	
<b>CHAPTER V</b>	
<b>DRYING</b>	127
Cupboard and tunnel dryers – Saturated atmosphere dryers – Placing in the dryer – Hollow-ware	
<b>CHAPTER VI</b>	
<b>BURNING REFRACTORY ARTICLES</b>	132
Kilns – Gas and coal-firing – Recuperators and regenerators – Fans v. chimney-draught – stages of burning – Effect of heat – Cooling – Burning hollow ware – Burning grog – Burning magnesite	

## CHAPTER VII

<b>FINISHED PRODUCTS</b>	162
Durability – Selection and application	
<b>BIBLIOGRAPHY</b>	165
<b>INDEX</b>	167
