

## CONTENTS

Preface	viii
<b>General Manufacturing</b>	
Practical Advantages of Patenting a New Product	3
Cost Analysis of Advanced Ceramic Manufacturing	13
The U.S. Department of Energy's Continuous Fiber Ceramic Composite Program – Components for Industrial Use	21
Case Study on Using Process Control Data for New Product and Process Development	27
<b>Design and Manufacture of Electronic Optical Components</b>	
Development of a Ceramic Powder for Use in Multilayer Capacitors with Nickel Electrodes	35
Development of AlN High-Temperature Piezoelectric and Use for in situ Monitoring of Ceramic Machine Tools and HIP Process	51
Thermodynamic of the Al-C-N-O System for the Production of Aluminum Nitride	61
Development of Erbium-Doped Optical Fiber at Bell Laboratories	73
<b>Design and Manufacture of Structural and Bioceramic components</b>	
Design and Manufacture of Ceramicsteel Tunnel Ceiling Panels	83
Ceramic Products form Garnet Sand	99
Properties of Novel Foam Ceramics	113
Hydroxyapatite Suspension for Implant Fabrication by Stereolithography	119
<b>1996 Corporate Technical Achievement Awards</b>	
Miraflex Fiber	129
3M Ceramic Composite Filters	131
Index	133
