

CONTENTS

Preface

Processing and Manufacturing

Ceramic Powder Compaction	3
Slurry Processing Options to Tailor Ceramic Properties	19
Grindability of Silicon Nitride Ceramics	31
Correlation of Surface Roughness with Ductility in Deterministic Microgrinding of Optical Glasses	45
The Twyman Effect Under Loose Abrasive Lapping and Deterministic Microgrinding	59
Pad Printer	71
Product Commercialization Bringing New Technology to Market	81
Multilayer Ceramic Capacitors for the Next Century	91
Patenting Ceramic Material Systems	107

Product Design and Qualification

The Kinetics of Ceramic Pin Grid Array Manufacturing	119
Ceramic Substrate Productivity Improvement from Large Greensheet Implementation	129
Dimensional Control Factors in Low Temperature Cofired Ceramics : Lamination Type and Pressure and Amount of Metallization	145
Coated Paper for Use as a Casting Surface in Tape Processing	157
LTCC Packaging Materials for Hybrid Semiconductor/Superconductor Circuits	167
Novel Glass Sealing Technologies	177
Cost Analysis of Ceramic Substrate Processing for Microelectronic Applications	189

Quality and Cost Reduction

Implementing Design for Environment (DFE) Within AT&T	203
Journey to Total Quality : A Small Business Perspective	213
The Influence of Employee Ownership, Self-Directed Teams, ISO-9001. And SPC on the Productivity of a Small Manufacturer of High Precision NTC Thermistors	223
Quality Assessment of Engineering Material Systems by Immittance Measurements	233
Resonance Inspection for Quality and Statistical Process Control Control	243
Nanocomposite Versus Monophasic Processing of PZT and PMN	253

Content

Fabrication of Telecommunication Lightguide Fiber	263
Lead-Free and Low-Lead Content Piezoelectric Ceramics for Environment	271
Index	285
