

## CONTENTS

	Page
1. Aramid Copolymer Fibers	1
1. Introduction	2
2. Search for Aramid Copolymer	4
3. Copolyterephthalamides of p-Phenylenediamine and 3,4'-ODA	12
4. Technora® Fiber	22
References	32
2. Aramid Structure/ Property Relationships and Their Role in Applications Development	35
1. Introduction	35
2. Fiber Technology	37
3. Applications Technology	48
4. Future Directions	77
References	80
3. Fibers from Naphthalene-Based Thermotropic Liquid Crystalline Copolyesters	83
1. Introduction	83
2. Polymer Liquid Crystals	85
3. Criteria for Melt Spinnability	88
4. Design of Thermotropic Copolyester Molecular Structures for Melt Spinning	88
5. Melt Spinning of thermotropic Copolyesters	97
6. Properties of Thermotropic Copolyester Fibers	104
7. Conclusions	110
References	110
4. Polymer Single Crystal Fibers	113
1. Introduction	114
2. Solid-State Polymerization Reactions	115
3. Fiber Morphology and Structure	120
4. Mechanical Properties	128
5. Composites	137
6. Conclusions	144
References	145
5. Aluminum Oxide Fibers	151
1. Introduction	151
2. Preparation and Processes	154
3. Chemical Structure	158
4. Fiber Structure	160
5. Physical and Chemical Properties	164
6. Applications and Markets	167
7. Future Trends	171
References	172
6. Lead Fibers	175
1. Introduction	175
2. Preparation of Lead Fibers	176
3. Structure of Lead Fibers	182
4. Applications of Lead Fibers	196
References	207

7.	Polystyrene-Based Functional Fibers	209
	1. Introduction	210
	2. Preparation	211
	3. Physical and Chemical Properties	222
	4. Fundamental Characteristics	224
	5. Applications	228
	6. Conclusion	251
	References	251
8.	Bioabsorbable Fibers for Medical Use	253
	1. Introduction	253
	2. Requirements for Medical Uses	254
	3. Biodegradation and Bioabsorption	256
	4. Surgical Applications of Bioabsorbable Fibers	259
	References	300
9.	Spinning Thermotropic Polymers	303
	1. Introduction	303
	2. Rheological Studies of the Tennessee Eastman Copolymer	306
	3. The Effect of Shear in the capillary	306
	4. Orientation Introduced by Elongational Flow Due to Spin Drawing	309
	5. Comparison of the Behavior of Blocky and Random Copolymers	315
	6. Rheology of the Hoechst Celanese Vectra Copolyesters	320
	7. Properties of Fibers spun from Vectra Copolyesters	321
	8. Improving Fiber Properties by Heat Treatment of Fibers	322
	References	324
	Index	327
