

CONTENTS

	Page
Chapter 1 Binding forces	
I Introduction	1
II Coulombic interactions	2
III Dipole interactions and perturbational forces	15
IV Hydrophobic interactions and the role of water	20
V Further reading	25
Chapter 2 The adsorption of dyes and adsorption equilibria	
I Introduction	26
II Simple two-component systems	27
III Three-component systems	40
IV The thermodynamics of adsorption equilibria	42
V Further reading	46
Chapter 3 Kinetics of dyeing	
I Introduction	48
II Phenomenological approaches	50
III Application of the thermodynamics of irreversible processes to dyeing	56
IV The diffusion equation	65
V The experimental determination of the diffusion coefficient of dyes	72
VI The interpretation of the diffusion constant	83
VII Models for migration of dyes in textile fibres	86
VIII The free volume model of diffusion	92
IX The dyeing of semicrystalline polymeric fibres	99
X Dye transport from moving liquid	105
XI Dyeing from organic solvents	111
XII References	113
Chapter 4 Dyes in solution	
I The non-ideality of dye solutions	117
II The aggregation of dyes in solution	122
III The solubility of dyes	131
IV The interaction of dyes with other solutes	133
V References	136
Chapter 5 The adsorption of dyes by proteins and polyamides	
I Protein and polyamide substrates	138
II Interactions with water	141
III The binding of acids and dyes by soluble proteins	148
IV The binding of acids and dyes by insoluble proteins and polyamides	162
V Binding mechanisms	176
VI References	177
Chapter 6 The adsorption of dyes by cellulosic substrates	
I The binding forces between cellulosic substrates and dyes	180
II The quantitative treatment of dyebath equilibria	182
III Complex dyeing systems for cellulosic substrates	195
IV References	219
Chapter 7 The adsorption of non-ionic disperse dyes	
I General	221

II	The transfer of dye from the crystalline to the adsorbed state	222
III	The nature of the dye adsorption	226
IV	Interactions between disperse dyes	238
V	References	242
Chapter 8 Fibre – reactive dyes		
I	Fibre-reactive dyes on cellulosic substrates	245
II	Fibre-reactive dyes on non-cellulosic substrates	270
III	References	274
Chapter 9 Problems of dyeing kinetics – specific situations		
I	The technical importance of diffusion in dyeing	276
II	Specific problems in colouration due to diffusional factors	282
III	References	298
Chapter 10 Relating theory and practice		
I	The practical value of theory	299
II	Examples of the effectiveness of theoretical understanding	300
III	References	309
