

CONTENTS

	Page
1. Preparation of the Fabric	1
1.1 Introduction	1
1.2 Identification of fibres	1
1.3 Preliminary scouring of the fabric prior to dyeing or printing	2
2. Printing Procedure	4
2.1 Introduction	4
2.2 Dissolving the dyestuff	4
2.3 Preparation of the printing paste	4
2.4 Thickening agents	4
2.5 Printing	5
2.6 Drying after printing	5
2.7 Steaming	5
2.8 Final treatment	11
3. The Different Fibres and the Dyestuffs Used in printing Them	12
3.1 Introduction	12
3.2 Fibres	12
3.3 Dyestuffs-Properties and notes relating to their application	13
3.4 Relative dyestuff strengths	14
4. Equipment and Methods of Use	15
4.1 Introductory survey of methods	15
4.2 Block Printing	17
4.3 Screen Printing	20
5. Thickening Agents and their Preparation for Use	32
5.1 Introduction	32
5.2 The preparation of selected thickening agents	33
5.3 Suitability of thickenings	39
6. Fastness Properties	41
6.1 Introduction	41
6.2 Light Fastness	42
6.3 Washing Fastness	42
6.4 Depth of shade	43
7. The Printing of Cotton and Viscose Rayon	44
7.1 Introduction	44
7.2 Procion dyestuffs	44
7.3 Direct dyestuffs	55
7.4 Acid dyestuffs printed on viscose rayon (the urea process)	57
7.5 Basic dyestuffs	59
7.6 Mordant dyestuffs	60
7.7 Azoic dyestuffs	65
7.8 Vat dyestuffs	69
7.9 Soledon dyestuffs	79
7.10 Soloxan Black SN 150	83
7.11 Alcian dyestuffs	85
7.12 Pigment printing by the Bedafin 2101 (or Bedafin 2001) process	87

8.	The Printing of Wool and Natural Silk	91
	8.1 Introduction	91
	8.2 Basic dyestuffs	91
	8.3 Acid dyestuffs	92
	8.4 Direct dyestuffs	94
	8.5 Procion dyestuffs	96
9.	The Printing of Cellulose Acetate	100
	9.1 Introduction	100
	9.2 Printing of cellulose acetate	100
	9.3 Printing of cellulose triacetate	103
10.	The Printing of Nylon	107
	10.1 Introduction	107
	10.2 Procionyl dyestuffs	107
	10.3 Nylomine acid P dyestuffs	108
	10.4 Procion dyestuffs	110
	10.5 Disperse dyestuffs	112
	10.6 Notes	113
