

CONTENTS

	Page
STATUS, PROCESS, AND EQUIPMENT	
Introduction	1
1. Conversion and Electrodeposited Coatings: A Total Concept	7
2. New Developments in the Theory and practice of Pretreatment of Metals Prior to Electrophoretic Coating	38
3. Changes in Zinc Phosphated Steel Surfaces during Electrodeposition	47
4. Power Supplies for Electrodeposition of Coatings	62
POLYMERS AND PIGMENTS	
Introduction	78
5. A Low Molecular Weight Esterfied Copolymer of Styrene and maleic Anhydride for Electrodeposition	80
6. Preparation of Electrodeposition Resins: Lactone Formation during Maleinization	88
7. Pigmentation of Electrocoatings	98
8. Studies in Cathodic Electrodeposition	110
THEORY	
Introduction	128
9. Electrodeposition of Carboxyl Containing Copolymers. Basic Studies, Phase Growth, Counterion Fixation	130
10. Electrochemistry of Polymer Deposition	149
11. Variables Affecting the kinetics of Polymer Electrodeposition	166
12. Dynamic Simulation of the Electrodeposition of Polymers	178
13. Throwing Power as Related to Material Properties with Analysis by Digital Computer Simulation	191
BATH MAINTENANCE AND DESIGN OF MERCHANDISE	
Introduction	204
14. Material Balance Considerations in an Electrocoating Tank	207
15. Turnover Studies on Amino Crosslinked Electrocoating Paints	216
16. Influence of Solvents on the Electrodeposition of Paint	227
17. Improved Corrosion Protection through the Electrocoated Edge Spot-Weld Hem Design	232
Index	237
