

CONTENTS

	Page
Status of Air Pollution Control Regulations	1
Physical Characterization of Water Dispersed and Soluble Acrylic Polymers	5
Methylated Urea Formaldehyde Cross-Linking Agents in Aqueous Emulsions	25
Polymer Parameters Affecting Aqueous Topcoat Systems	35
Performance Characteristics of a Fast Curing Acrylic Resin in Electrocoating Paints	45
Electrodeposition Systems : Composition, Characteristics, Performance and Maintenance	57
Ultrafiltration of Electrocoating Systems	69
Quantitative Prediction of Recycling Efficiency of Electrocoating Paint Solids Through Ultrafiltrate Rinse	83
Gas Chromatographic Determination of Amine Solubilizers and Hydroxyl-Containing Solvents In Electrocoat systems	93
The Ultraviolet Curing of coatings	109
The Ultraviolet Cure of solventless Resins – A Pollution Free Method?	135
Some Fundamental Aspects of the Polymerization of Vinyl Monomers with Electron Beams	149
The present Status of Electron Beam Curing of Coatings	169
Electron Beam Processor Technology	179
Electron Beam Curing – A Non-Polluting System	195
Production Systems for Electrostatic Spray Application of Powder Coatings	207
Electrostatic Powder Coating – Potentially A Pollution Free Finishing Method	225
Measurement of Opacity and Coverage in Thin-Film Powder Coatings	235
Flow at the Interfaces of Powder Coatings	251
Index	271
