

CONTENTS

	Page
1. Nature of Surfactants	1
1.1 Introduction to surfactants	1
1.2 Natural surfactants	1
1.3 Synthetic surfactants	3
1.4 Types of surfactant	4
1.5 Surface activity	7
References	11
2. Adsorption at liquid interfaces	13
2.1 Introduction	13
2.2 Direct measurement of amount adsorbed	13
2.3 Adsorption Studied via surface and interfacial tension measurement	14
2.4 Adsorption of ionic surfactants	17
2.5 Equations of state for adsorbed surfactants	18
2.6 Adsorption at the liquid/ liquid interface	20
2.7 Ultra-low interfacial tensions	23
2.8 Physical properties of adsorbed monolayers	28
2.9 Dynamic aspects of adsorbed surfactants	29
3. Insoluble monolayers	33
3.1 Introduction	33
3.2 Historical background	33
3.3 Phase changes and types of film	36
3.4 Ionised monolayers	42
3.5 X-ray and neutron scattering	44
3.6 Dynamic effects	51
3.7 Practical applications of insoluble monolayers	55
References	57
4. Langmuir-Blodgett multilayers	59
4.1 Introduction	59
4.2 Historical backgrounds	59
4.3 Types of monolayer deposition	62
4.4 Structure of multilayers	66
4.5 Applications of LB films	71
4.6 Self-assembly systems	77
References	79
5. Micelle formation	82
5.1 Evidence for micelle formation	82
5.2 structure of micelles	84
5.3 Dynamics of micellar aggregation	100
5.4 The critical micelle concentration (CMC)	105
5.5 Thermodynamics of micelle formation	112
5.6 Solubilisation	118
5.7 Applications of micellar solutions	120
References	126
6. Mixed-micelle formation	130
6.1 Qualitative observations	130
6.2 Thermodynamics of mixed-micelle formation	131

6.3	Thermodynamics of non-ideal mixed-micelle formation	134
6.4	Some major findings- surfactant synergisms	138
6.5	Further examples of mixed-micelle formation	143
6.6	Positive deviations from ideality – mixtures of perfluoro and Hydrocarbon surfactants	144
	References	146
7.	General phase behaviour of surfactants	147
7.1	General features of surfactant phase behaviour	147
7.2	The Krafft boundary	148
7.3	The cloud point	154
7.4	Mesomorphic phases	158
	References	171
8.	Dispersions of surfactant aggregates	173
8.1	Introduction	173
8.2	Vesicles and liposomes	173
8.3	Applications of liposomes	180
8.4	Dispersions of Crystals	186
	References	190
9.	Adsorption on solids	192
9.1	Introduction	192
9.2	Adsorption at very low concentration	200
9.3	Lateral interactions between adsorbed surfactant molecules	202
9.4	Effect of surfactant structure on adsorption	204
9.5	Stabilisation of dispersions	211
9.6	Other applications	216
	References	220
10.	Microemulsions	222
10.1	Definition of microemulsions	222
10.2	Use of co-surfactants	225
10.3	Interfacial tension in microemulsions	227
10.4	Properties of microemulsions	230
10.5	applications of microemulsions	239
	References	247
11.	Surfactant bilayers, foams and emulsions	250
11.1	Introduction	250
11.2	Soap films	252
11.3	Measurement of film thickness	258
11.4	Foams and foam stability	264
11.5	Lipid bilayers	267
11.6	Formation and stability of emulsions	269
	References	276
	Index	279
