

CONTENTS

	Page
Part I : Phase Behavior and Phase Equilibria in Surfactant Solutions	
Principles of Phase Equilibria in Surfactant – Water systems	3
On the Phase Behavior of Systems of the Type H ₂ O – Oil – Nonionic Surfactant – Electrolyte	23
Phase Equilibria in and Lattice Models for Nonionic Surfactant-Water Mixtures	35
Amphiphilic Aggregates in a Lyotropic Nematic Phase	59
Liquid Crystalline Structures Occurring in Aqueous Systems of a Totally Fluorinated Fatty Acid and Some of its Salts	69
Water ² H and ¹⁷ O NMR in Dodecylammonium Chloride/D ₂ O Lyotropic Mesophases	79
The Interaction Between Water and Ethylene Oxide Groups in Oligo (Ethylene glycol) Dodecyl Ethers as Studied by ² H NMR in Liquid Crystalline Phases	93
Surfactant Alkyl Chain Mobility and Order in Micelles and Microemulsions	107
Thermodynamics of Partially Miscible Micelles and Liquid Crystals	129
³¹ P and ² H NMR Studies of Phase Equilibria in the Three Component System: Monoolein-Dioleoylphosphatidylcholine-water	143
Micelle Formation and Phase Equilibria of Surface Active Components of Wood	153
Fluid Microstructures of Sodium 4 – (1'-Heptylnonyl) Benzenesulfonate Mixtures	175
Phase Structures and phase Diagrams of Some Surfactant Systems with Divalent Counterions Effect of Ca ²⁺ and Mg ²⁺ Counterions on the Stability of Liquid crystalline Phases	193
A New Optically Isotropic Phase in the Dilute Region of the Sodium Octanoate –Decanol – Water System	205
NMR and Polarized Emission Studies of Cubic Phases and Model Membranes	219
The use of Freeze-Fracture and Freeze-Etching Electron Microscopy for Phase analysis and Structure Determination of Lipid system	237
The Structure of Plasma Lipoproteins; Evaluation by X-Ray and Neutron Small – Angle Scattering	259
Part II Structure, Dynamics and Characterization of Micelles	
The Packing of Amphiphile Chains in Micelles and Bilayers	279
Molecular Organization in Amphiphilic Aggregates	307
The Nature of the Surfactant –Block Model of Micelle Structure	321

Structure in Micellar Solutions : A Monte Carlo Study	337
Multi-Method Characterization of Micelles	347
Tracer Self – Diffusion Studies of Surfactant Association	359
An Introduction to Neutron Scattering on Surfactant Micelles in Water	373
Light Scattering and Small – angle Neutron Scattering Investigations of Double – Tailed Surfactants in Aqueous Solutions	405
Viscoelastic Detergent Solutions	425
The Effect of Intermicellar Interactions on Interpretations of Micellar Diffusivities by Dynamic Light Scattering	455
Laser – Light Scattering Study of Nonionic Micelles in Aqueous Solution	471
Light Scattering from Concentrated Solutions of Sodium Octanoate Micelles	487
NMR and ESR Studies of Dibutylphosphate Micellar Aggregates	501
Conformational Change of Surfactants Due to Association; Raman Scattering and Carbon-13 NMR Studies	517
An NMR Study of Paramagnetic Relaxation Induced in Octanoate Micelles by Divalent Ions	527
ESR Study of Spin Labels in Surfactant micelles	541
Spin Label Study of Molecular Aggregates	559
Micellar Structure and Water Penetration Studied by NMR and Optical Spectroscopy	565
Solubilization and Water Penetration into Micelles and Other Organized Assemblies as Indicated by Photochemical Studies	585
Critique of Water Penetration Studies in Micelles using Extrinsic probes	599
The Size of Sodium dodecyl Sulfate micelles with Various Additives: A Fluorescence Quenching Study	613
Fluorescence Quenching Aggregation Numbers in a Non-Ionic Micelle Solution	627
Fluorescence Quenching Equilibria Studies in Ionic Micelles in Aqueous Media	645
Fluorescence Quenching In Micellar Systems	663
FT-IR Studies of Aqueous Surfactants: The Temperature Induced Micelle Formation	673
About the Contributors	691
