

## CONTENTS

	Page
Part VII Reverse Micelles	
Kinetic Consequences of the Self Association Model in Reversed Micelles	1435
Dynamics of Reverse Micelles	1453
Reverse Structures in a p-Nonylphenolpolyethyleneglycol (9.6 Mole Ethylene Oxide) Water System	1463
Reactivity Studies in A.O.T. Reverse Micelles	1471
Preparation of Colloidal Iron Boride Particles in the CTAB-n-Hexanol-Water Reversed Micellar System	1483
Part VIII Microemulsions and Reactions in Microemulsions	
Microemulsions – An Overview	1501
The Water-in-Oil Microemulsion Phenomenon: Its Understanding and Predictability from Basic Concepts	1533
Phase Behavior of Microemulsions: The Origin of the Middle Phase, of Its Chaotic structure and of the Low Interfacial Tension	1551
Influence of Cosurfactant Chemical Structure upon the Phase Diagram Features and Electrical Conductive Behavior of Winsor IV Type Media (So-Called Microemulsions)	1583
Fluorescence Probe Study of Oil in Water Microemulsions	1627
Characterization of microemulsion Structure Using Multi Component Self-Diffusion Data	1651
Photon Correlation Techniques in the Investigation of Water-in-oil Microemulsions	1663
Water/Oil Microemulsion Systems Studied by Positron Annihilation Techniques	1675
Zeta Potential and Charge Density of Microemulsion Drops from Electrophoretic laser Light Scattering – some Preliminary Results	1693
Low Temperature Dielectric Properties of W/O Microemulsions and of their Highly Viscous Mesophase	1709
Mutual and Self Diffusion Coefficients of Microemulsion from Spontaneous and Forced Light Scattering Techniques	1729
Percolation and Critical points in Microemulsions	1737
Structural and Dynamic Aspects of Microemulsions	1745
Structure of Nonionic Microemulsions by Small Angle neutron Scattering	1759
Fluctuations and Stability of Microemulsions	1781

Influence of Salinity on the Composition of Microemulsion Pseudophases: Correlation Between Salinity and Stability	1789
Phase Studies and Conductivity Measurements in Microemulsion-Forming Systems Containing a Nonionic Surfactant	1805
Existence of Transparent Unstable Solutions in three and Four Components Surfactant Systems	1821
Theory of Phase Continuity and Drop Size in Microemulsions II. Improved method for Determining inversion Conditions	1829
Effect of the Molecular Structure of Component on Micellar interactions in Microemulsions	1843
The Importance of the Alcohol Chain length and the nature of the Hydrocarbon for the Properties of Ionic Microemulsion Systems	1867
Transport of Solubilized Substances by Microemulsion Droplets	1881
Light Scattering and Viscometric Investigations of Inverse Lattices Formed by Polymerization Of Acrylamide in Water-Swollen Micelles	1897
Application of the Ion-Exchange Model to O/W Microemulsions	1911
Part IX General Overviews and Other Papers	
HLB – A Survey	1925
Polymerization of Organized Surfactant Assemblies	1947
Light Scattering by Liquid Surfaces	1991
Surface Charge Density Evaluation in Model Membranes	2015
Breakdown of the poisson-Boltzmann Approximation in Polyelectrolyte Systems : A Monte Carlo simulation Study	2023
Colloidal Stability of liposomes	2039
Fast Dynamic Phenomena in Vesicles of Phospholipids During Phase Transitions	2059
Dynamic light Scattering Study of DMPC Vesicles Coagulation Around the Phase Transition of the Aliphatic Chains	2081
The Effect of Ginseng Saponins on Biochemical Reactions	2093
Determination of Very Low Liquid –Liquid Interfacial Tensions from the Shapes of Axisymmetric Menisci	2113
Mechanism of using Oxyethylated Anionic Surfactant to Increase Electrolyte Tolerance of Petroleum Sulfonate	2121
Local Anesthetic-Membrane Interaction: A Spin Label Study of Phenomena That Depend on Anesthetic's Charge	2145
About the Contributors	2157
Index	xxiii
