

CONTENTS

	Page
Part III Reverse Micelles	
Spectroscopic Evidence for a Unified Mechanism of Aggregation of Surfactant Molecules in Apolar Media	565
Reverse Micelles as Membrane Mimetic Agent – A Study of Cholesterol Solubilization in Water – Aerosol OT – Isooctane System	581
Amphiphilicity of Aerosol OT in Nonpolar Solvents	591
Charged Micelles in Surfactant-Water-Nonaqueous Liquid Systems	601
Field Dissociation Effect of Aerosol OT in Cyclohexane	609
Part IV Micellar Catalysis and Reactions in Micelles	
Micellar Charge Effects Upon Spontaneous Nucleophilic Additions and Substitutions	625
Reaction Rate Control By Salt Effects in Micellar Catalysis	637
Effects of Reversed Micelles on Prototropic Interactions and Fluorescence Behavior of 5-Aminothiabendazole: A Model Bioaggregates System for Drugs	651
Micellar Effects on the Back Reaction Following Photochemical Electron Transfer From a Water Soluble Porphyrin to Mono and Dialkylviologens	663
Photoelectron Transfer in Reverse Micelles: Chlorophyll Used as a Sensitizer	673
Hydrated Electron in Reverse Micelles used as a Structural Probe	685
Hydrogenation Activity of Colloidal Cobalt Boride Particles Synthesized in the CTAB-1-Hexanol-Water Reversed Micellar Systems	697
Spectrophotometric Studies on some Dye-Surfactant Complexes	713
Part V Biological Amphiphiles	
Syntheses, Aggregate morphologies, and Applications of Membrane-Forming Amphiphiles	727
Structure of Liposomes by Electron Microscopy	745
On the interaction of Triton X-100 With Multilamellar Phosphatidylcholine Liposomes	759
Fluorescence Decay of Pyrene Probes in Small Unilamellar L _α – Dipalmitoylphosphatidylcholine Vesicles Above the Phase Transition Temperature	773
Polymorphism and Phase Diagrams of Saturated Phosphatidylethanolamines	783
N-Acylaminoacids: Amphiphilic Properties and Interactions with the Lipid Bilayers	793
Physical Studies of Dilute Bile Salt-Lecithin Mixtures	807

Interactions Between Steroidal Surfactants and Human Milk Lipase	817
Micellar Structure in Intestinal Bulk – Relations with Mucosal Uptake	829
The Effect of Long and Short Range Forces in Amphiphilic Monolayers at the LE-LC Transition	841
Binding of Detergents by Membrane Proteins	853
Interaction Between Ionic Detergents and A Protein	861
Lipid-Protein Interactions: A Reinvestigation of Melittin Induced Effects on the Structure and Dynamics of Phosphatidylcholines	873
The Action of Melittin on Biological Model Membranes as Viewed by ² H-NMR	885
Deuterium NMR of Biological Membranes: Interactions of Polyene Antibiotics With Cholesterol	897
Binding of Short Synthetic peptides at the Phospholipid Interface	907
Micellar Systems for Defining the Active Site of Phospholipase-A2: Methyl Branching in Short-Chain Lecithins	917
Short-Chain Lecithin-Triglyceride Mixed Particles: Physical Studies of the Surface Accessibility Of Triglyceride and Correlation with Lipase Kinetics	931
The Effect of Cysteamine, A Divalent-Like Molecule, on Polar Head Groups in DPPC Model Membranes; A Spin Label, DSC and Turbidimetry Study	943
Phase Transitions and Phase Separations Induced by Cationic Polypeptides in Dipalmitoylphosphatidylglycerol Bilayers: A Fluorescence Polarization Study	955
Part VI Monolayers and Adsorption of Surfactants	
Self-Assembling Monolayers : A Study of Their Formation, Composition and Structure	965
On the Mechanism of Formation of Tridimensional Phases Form Monolayers at the Water-Air Interface	979
Theory of Stabilization of Amphiphilic Films Due to Surface Interaction Induced Order	995
Surface Diffusion in Fatty Acid Monolayers	1005
The Structure of Monolayers and Multilayers of Cyanine Dyes Mixed with Stearic Acid	1015
The Intrfacial Behavior of Proteins in Relation to Their Structural Properties	1027
Mutual Adsorption of Serum Albumin and Long-Chain Cationic Surfactants at the Alumina-Water Interface	1041
The Effects of Polyoxyethylene Chain Length Distribution on the Interface Properties of Polyoxyethylenated n-Dodecyl Alcohols	1055
Surface Interaction Between Two Simultaneously Adsorbing Surfactants: Mixtures of Anionic and Cationic Surface Active Agents	1067
Solution Chemistry Studies and Flotation Behaviour in Hydrolyzable Surfactant Systems	1081
Interfacial Adsorption of Surfactants in the Presence of Polymers and Its Effect on Mineral Flotation	1095

Wetting of Solids by Surface Active Agents: Dispersion and the Polar Surface Tension Components	1105
The Effect of Surfactant Adsorption on the Dynamic Wetting of Fibers	1113
About the Contributors	1121
