

## CONTENTS

	Page
Preface	12
Units and Factors	14
Chapter 1 Preliminary information including some definitions and some elementary chemistry	
1.1 Historical Outline	19
1.2 Surfactants, Builders and Fillers	21
1.3 Types of soaps and soapmaking terms	23
1.4 Acids, alkalis, and buffers pH and Indicators	27
1.5 Inorganic materials important in the detergents industry	35
1.6 Bleaches, inorganic and organic	42
1.7 A scheme for the analysis of soap products	47
1.8 Specifications	50
1.9 Some technical implications of weight control legislation	52
1.10 Water hardness and water softening	53
1.11 Environmental problems	56
Chapter 2 What detergents have to do and how they do it. The roles of various ingredients and Some principles of formulation. Market survey and recent trends	
2.1 Detergent duties	59
2.2 How detergents work	60
2.3 Additional information concerning ingredients and their roles	76
2.4 Types of detergent products and their formulation	91
2.5 Market survey The rise and fall of product types ; and some recent trends	103
2.6 Products for use in commercial and institutional laundries	116
Chapter 3 The Oils and fats: their nature, storage and pretreatment	
3.1 The fatty acids	118
3.2 The fatty acid compositions of oils and fats	120
3.3 Other differences between fats	124
3.4 Some analytical characteristics of oils and fats	125
3.5 Specifications. Qualities of tallows and greases	129
3.6 The pretreatment of oils and fats;and the production of by-products used in soaps	129
3.7 Points in the selection of fat blends for various soaps	140
3.8 Fatty acid and glycerol contents of fats, and related matters, Glycerine Credit	143
3.9 Handling and storage of oils and fats Deterioration of fatty materials	147
Chapter 4 The manufacture of soap base by direct saponification of oils and fats	
4.1 General	152
4.2 Some principles	152
4.3 Production of soap base by the traditional method in single vessels	159
4.4 Developments of the traditional process including the use of groups of vessels	169
4.5 An additional principle	169
4.6 The components used in modern soapmaking processes	171
4.7 Complete soapmaking plants	186
4.8 Plant Performance	190
4.9 Preliminary treatment of spent lyes in the soapmaking department	192
Chapter 5 Manufacture and Purification of fatty acids and the production of soap base from them Miscellaneous methods of soap manufacture	
5.1 General background	195
5.2 Fat splitting	196

5.3	Materials of construction for splitting and other fatty acid plants	207
5.4	distillation of fatty acids	211
5.5	Separation of solid and liquid fatty acids	225
5.6	Production of soap base from fatty acids	226
5.7	Comparison between soap manufacture by direct saponification and by the Fatty acid route	234
5.8	Miscellaneous methods of soap production	234
5.9	Soaps made from synthetic fatty acids	236
Chapter 6 Production of Solid soaps from soap base household soaps and toilet soaps		
6.1	General	237
6.2	The older processes for household soaps	237
6.3	Some principles related to the production of extruded soaps	240
6.4	Properties of solid soaps	258
6.5	Ingredients added to household and toilet soaps	262
6.6	Efflorescence	268
6.7	Modern processes for the production of household soaps	269
6.8	Equipment for toilet soap production	272
6.9	Transparent and translucent soaps	280
6.10	Floating soaps	283
6.11	Marbled toilet soaps	284
6.12	Filled, or run, soaps	284
Chapter 7 Soap Powders		
7.1	General	287
7.2	Spray-chilled powders	288
7.3	Spray-dried powders	294
7.4	Other manufacturing processes	295
Chapter 8 The recovery and refining of glycerine		
8.1	General	296
8.2	Some analytical tests and specification	297
8.3	Purification of soap lyes and sweet waters	303
8.4	Evaporation of purified liquors to crude glycerine	306
8.5	Treatment of crude glycerine to remove low molecular mass fatty acids	331
8.6	Distillation of glycerine	332
8.7	Bleaching and the treatment of distillates with ion-exchange resins to upgrade Quality	355
8.8	Production of refined grades of glycerine without distillation	355
Chapter 9 Sulphonation and sulphation		
9.1	General	358
9.2	Some physical properties of the sulphur trioxide/water system	361
9.3	Sulphonation with concentrated sulphuric acid or oleum	362
9.4	Sulphonation with sulphur trioxide	366
Chapter 10 The Manufacture of NSD (non-soapy detergent) powders		
10.1	General powder characteristics	388
10.2	Methods of powder production	390
10.3	The spray drying process	391
10.4	Production of NSD powders without spray drying	421
Chapter 11 The manufacture of liquid detergents and miscellaneous detergent products		
11.1	Liquids	426
11.2	Fabric washing detergents in measured doses	431
11.3	Scouring products	431
11.4	Machine dishwashing products	436
11.5	Soap chips, noodles, and flakes	438
11.6	Shaving soaps	439
11.7	Soft soaps	439

Appendix 1	Names and address of some companies and organizations	441
Appendix 2	Production and maintenance of vacuum	446
Appendix 3	Elements of fan engineering	452
Bibliography and other references		460
Index		464
