

CONTENTS

	Page
1. Introduction	3
2. Processing and Chemical Structure of Epoxies Used in Filament Wound Composites	3
2.1 Introduction	3
2.2 Cure Reactions	4
2.3 Improved Filament Winding Epoxies	4
3. Processing and Chemical Structure of TGDDM-DDS Epoxies Used in Composites Fabricated from Prepregs	6
3.1 Introduction	6
3.2 Starting Materials-Impurities	7
3.3 NMR Characterization of BF_3 :Amine Catalysts	7
4. DSC Studies of the Cure Reactions	15
4.1 Introduction	15
4.2 Prepreg Mixtures and Their Components	15
4.3 Environmental Sensitivity of BF_3 : $\text{NH}_2\text{C}_2\text{H}_5$ Catalyst	18
4.4 Commercial Prepregs	18
5. FTIR Studies of the Cure Reactions	18
5.1 Introduction	18
5.2 TGDDM Epoxide Homopolymerization	19
5.3 TGDDM-DDS Cure Reactions	22
5.4 Rates and Chemistry of Cure Reactions	28
5.5 Prepreg Processing Viscosity	30
6. Physical Structure	31
6.1 Introduction	31
6.2 Macroscopic Inhomogeneities	31
6.3 Free Volume	31
6.4 Network Structure	32
7. Deformation and Failure Modes	35
8. Structural Parameters that Control Mechanical Properties	38
9. Service Environment Aging	39
10. References	40
