

## CONTENTS

	Page
PART ONE, THERORETICAL ASPECTS	
1. General Conditions for Wetting and for Adhesion	
1 Conditions for a multi-layer system	3
2 Conditions for wetting	3
3 Conditions for adhesion	5
4 Influence of the thickness of the layer	7
5 Topography of adsorbing layers	7
References	8
2. Molecular Forces	
1 Introduction	9
2 Phenomenological constants	9
3 Molecular constants	15
4 Molecular forces	18
5 Molecular structure and phenomenological behaviour	21
6 Some specific data	25
7 Conclusions	29
References	32
3. Rheology of Adhesives	
1 Introduction	33
2 Rheology of adhesives before and during hardening	45
3 Rheology of hardened adhesive layers	73
4 Brittleness	86
References	88
4. Static Problems	
Part 1 Theoretical investigations of the stresses in joints	91
1 Introduction	91
2 Torsion Joints	92
3 Butt joints	92
4 Simple lap joints	93
5 Volkersen's analysis of lap joints	97
6 The theory of goland and Reissner	98
7 Comparison and discussion of the results	104
8 Double lap joints	107
9 Gap joints	108
10 Influence of the mechanical properties of adherends and adhesives	110
11 Other theories	115
12 Residual stresses	115
13 Stresses in laminated wood	116
14 Glass-to-metal seals	121
Part 2 Experimental investigation of the stresses in joints	129
1 Introduction	129
2 The principle of similarity	130
3 Extensometer tests on lap joints	132
4 Previous photoclastic tests	134
5 The adhesive itself as photoclastic materials	136
6 Models of joints made of Catalin 800	138
References	142

PART TWO, TECHNOLOGICAL ASPECTS

5.	Organic Adhesives	
	A. Animal Glues and Their Industrial Applications	
	1 Inherent properties of animal glues	147
	2 Preparation and handling of glue solutions	151
	3 Uses and general distribution of hide and bone glues	156
	4 Industrial applications of animal glue	157
	5 Additional applications	177
	6 Status of animal glue industry and prospects for the future	182
	Acknowledgements	182
	References	183
	B. Vegetable Adhesives	
	1 Introduction	184
	2 Starches	185
	3 Dextrines	187
	4 Dextrine adhesives	188
	5 Alkali conversion	192
	6 Salt conversion	193
	7 Enzyme conversion	194
	8 Starch and cellulose derivatives	196
	9 Natural gums	197
	10 Acid hydrolyzed starches	198
	11 Starch oxidations	199
	References	200
	C. Synthetic resin adhesives	
	1 Introduction classification	201
	2 Economic significance of synthetic resin adhesives	201
	3 Thermosetting resin adhesives	203
	4 Thermoplastic resin adhesives	234
	D. Asphaltic Bitumen	
	1 Introduction	250
	2 Properties of asphaltic bitumen	254
	3 Properties of the system adhesive –adherends	272
	4 Concluding remarks	276
	References	277
6.	Inorganic Adhesives and cements	
	A. Inorganic Adhesives : Sodium Silicate	278
	1 Introduction	278
	2 Standard Properties	279
	3 Constitution	280
	4 Bond Strength	281
	5 Working Properties	285
	6 Anhydrous sodium silicate	296
	7 Reaction of sodium silicate with paper	298
	8 applications of unmodified sodium silicate adhesive	299
	9 Corrugated paperboard	304
	10 Solid fiber board	329
	11 Sealing	330
	12 Labeling	333
	13 Wallboard	334
	14 Fiber tubes, cans and drums	335
	15 Insulation, etc	336
	16 Heterogeneous mixtures	339
	References	344
	B Inorganic Cements	349

1	Introduction	349
2	Hydraulic cements	349
3	Plaster of paris	352
4	Lime mortars	354
5	Sorel cement	355
6	Litharge	358
7	Iron cements	360
8	Sulfur cements	361
9	Colloidal solutions	364
10	Dental cements	376
11	Conclusion	382
	References	383
7.	Rubbery Adhesives	
1	Introductory	386
2	Correlations between structure and properties of rubber adhesives	387
3	Measuring the strength of a rubber adhesive bond	393
4	Fluid adhesives	397
5	The adhesion of rubber to metals	407
6	The adhesion of rubber to fibers	419
7	Literature, references and patents	422
8.	Adhesion in Soldered Joints	
1	Introductory	427
2	Soldering contrasted with glueing	427
3	Influence of surface condition	428
4	Cohesion and adhesion in soldered joints	428
5	Treatment of oxidized surfaces	433
6	Wetting of metals by tin and solder	434
7	The structure of the bond in soldered joints	446
8	Nature of compound layers	447
9	Adhesion of anti-friction alloys to tinned surfaces	450
10	The effect of the rate of cooling on the adhesion	454
11	Strength of solders and of soldered joints	455
	References	462
9.	The Physical testing of Adhesion and Adhesives	
1	The significance of tests	463
2	Tests of joint strength	465
3	Durability and ageing tests	485
4	Some other physical tests	488
	References	491
	Author Index	495
	Subject Index	504
