

CONTENTS

	Page
PART ONE: Chemistry of Adhesion – The Importance of Interface	
Introductory Remarks	3
Recent Developments in Adhesive and Sealant Chemistry	5
Overview of Adherence Phenomena	63
An Analytical Method for Determining the Surface Energy of Solid Polymers	95
Effect of Amine Surface Treatment on the Adhesion of a Polyurethane to the Surface	121
Effect of Silane on Glass/Resin Adhesion Strength	139
Discussion	165
PART TWO : Physics of Adhesion – Characterization of Surface and Bulk of Adhesive Systems	
Introductory Remarks	171
New Applications of ESCA	175
Fracto – Emission Accompanying Adhesive Failure	193
Monitoring Epoxy Cure Kinetics with a Viscosity-Dependent Fluorescent Probe	245
Dynamic Mechanical Properties of Silicone pressure Sensitive adhesives	257
The Viscoelastic Properties of Pressure-Sensitive Adhesives	269
Block Copolymer Adhesive Studies	297
Discussion	311
PART THREE: Radiation-Curable Adhesives	
Introductory Remarks	317
Ultraviolet Cured Pressure-Sensitive adhesives	319
Recent Progress in Photoinitiated Cationic Polymerization	351
Polymer and Formulation Design Characteristics for Developing Bonding Capabilities of Radiation-Curable Coatings and Adhesive Systems	363
Dynamic Thermal Analysis Characterizations of Electron –Beam Cured Adhesives	379
Reactive Butadiene/Acrylonitrile Liquid and Solid Elastomers: Formulating Acrylic, Anaerobic, and Radiation-Curable Adhesives	393
Photoinitiators: A Review of Mechanisms and Applications	409
Discussion	439
PART FOUR: High Temperature Adhesives	
Introductory Remarks	445
Status of High Temperature Adhesives	447
Polyimide Adhesives: Modified with ATBN and Silicone Elastomers	467
The Application of Thermodynamic and Spectroscopic techniques to Adhesion in the Polyimide/Ti 6-4 and Polyphenyl-Quinoxaline-ti 6-4 systems	481
Evaluation of High Temperature Structural Adhesives for Extended Service	489
Aminosilane and Metal Modifications of Polyimide Surfaces	517
Influence of Molecular Weight on Fracture Behavior of Polyphenylquinoxaline Thermosets	525
Discussion	533
PART FIVE: Anaerobic and Structural Adhesives	
Introductory Remarks	539
Some Recent Developments in Scanning electron microscopy	543
Potential Anaerobic and Structural Acrylic Modified Polyester Adhesives	575

Anaerobic Adhesives Containing Maleimides Having Improved Thermal Resistance	589
Chemistry of Accelerators for Curing Anaerobic Adhesives – Reaction of N, N-Dimethylaniline Derivatives with Cumene Hydroperoxide	603
Chemistry, Physical Properties and Durability of structural Adhesive Bonds	617
Reactive Butadiene/Acrylonitrile Liquid and Solic Elastomers: A Bibliography for Formulating Epoxy Structured Adhesives	643
A Low Curing Temperature CTBN-Toughened Epoxy Adhesive	655
Summarizing Remarks	665
Discussion	667
 PART SIX: Trends in Adhesive Research	
Developments in and Limitations of Adhesive Materials for Severe Environments and a Long Service Life	675
Elastomers and Resin Modifiers for Water-Base Adhesives	693
“Aerobic” Acrylic Adhesives – New Technology in Acrylic Adhesives	725
Radiant Energy Curable Adhesives	753
Isocyanatoethyl methacrylate: A Latent Cross Linker for Coating Adhesive Resins	765
Moisture Permeation of Polymer Sealants and Interface Modifying Films	785
ESCA and AES Studies of the Interfacial Chemical Bonding between Aluminum and Chromium (III) Fumarate-Coordination Compound	799
Adhesive Research in China	821
Discussion	833
Contributors	835
Author Index	845
Subject Index	857
