<b>Part I Fundamentals of adhesive bonding</b>	
<b>1 History of adhesive bonding</b>	<b>3</b>
P A FAY, UK	
1.1 Early days	3
1.2 The industrialisation of glue making	10
1.3 The advent of synthetic polymers	15
1.4 References	19
<b>2 What are adhesives and sealants and how do they work?</b>	<b>23</b>
J COMYN, Loughborough University, UK	
2.1 Introduction	23
2.2 Adhesives which harden by loss of solvent	24
2.3 Adhesives which harden by loss of water	24
2.4 Adhesives which harden by cooling	26
2.5 Adhesives which harden by chemical reaction	27
2.6 Adhesives which do not harden – pressure-sensitive adhesives	34
2.7 Adhesion by physical adsorption	35
2.8 Adhesion by chemical bonding	41
2.9 The electrostatic theory of adhesion	45
2.10 Mechanical interlocking	45
2.11 Adhesion by interdiffusion	45
2.12 Weak boundary layers	47
2.13 Pressure-sensitive adhesion	47
2.14 Future trends	49
2.15 Sources of information	49
2.16 References	50

<b>3</b>	<b>Surfaces: how to assess</b>	<b>52</b>
	J F WATTS, University of Surrey, UK	
3.1	Introduction	52
3.2	Surface topography	53
3.3	Surface thermodynamics	64
3.4	Surface chemical analysis	67
3.5	Concluding remarks	73
3.6	Acknowledgements	73
3.7	References	73
<b>4</b>	<b>Surfaces: how to treat</b>	<b>75</b>
	D BREWIS, Loughborough University, UK	
4.1	Introduction	75
4.2	Pretreatments for metals	76
4.3	Pretreatments for inorganic materials	78
4.4	Pretreatments for plastics	80
4.5	Pretreatments for elastomers	85
4.6	Summary and future trends	86
4.7	Literature	87
4.8	References	87
<b>Part II Mechanical properties</b>		
<b>5</b>	<b>Stress analysis</b>	<b>91</b>
	A CROCOMBE, University of Surrey, UK	
5.1	Introduction	91
5.2	A qualitative description of adhesive joint stresses	91
5.3	Closed form, global stress analysis of adhesive joints	97
5.4	Finite element analyses of adhesive joints	107
5.5	Future developments	118
5.6	References	119
<b>6</b>	<b>Environmental (durability) effects</b>	<b>123</b>
	J COMYN, Loughborough University, UK	
6.1	Introduction	123
6.2	Additives to reduce photo-oxidative degradation	123
6.3	Behaviour of structural joints to metals in wet surroundings	125
6.4	Water and adhesives	133
6.5	Water and adhesive interfaces	137
6.6	Other fluids	140

6.7	Timber joints	140
6.8	Future trends	140
6.9	Further information	141
6.10	References	141
<b>7</b>	<b>Non-destructive testing</b>	<b>143</b>
	P C A W L E Y, Imperial College, UK	
7.1	Introduction	143
7.2	Conventional ultrasonics	145
7.3	Bond testers	152
7.4	Rapid scanning methods	154
7.5	Cohesive property measurement	159
7.6	The interface problem and monitoring environmental degradation	160
7.7	Conclusions	161
7.8	References	161
<b>8</b>	<b>Impact behaviour of adhesively bonded joints</b>	<b>164</b>
	C S A T O, Tokyo Institute of Technology, Japan	
8.1	Introduction	164
8.2	Experimental method for impact test of adhesives and adhesively bonded joints, and characteristics of adhesives under high rate loading	165
8.3	Stress distribution and variation in adhesively bonded joints subject to impact load	181
8.4	Actual joint design considering impact load	185
8.5	Future trends and further information	187
8.6	Conclusion	187
8.7	References	187
<b>9</b>	<b>Fracture mechanics of adhesive bonds</b>	<b>189</b>
	D A D I L L A R D, Center for Adhesive and Sealant Science, USA	
9.1	Introduction	189
9.2	An energy criterion for failure	190
9.3	The stress intensity factor approach	191
9.4	The energy release rate approach	194
9.5	Thermodynamic, intrinsic, and practical adhesion energy	196
9.6	The effect of mode mixity	197
9.7	Experimental evaluation of fracture energy	199
9.8	Durability	201
9.9	Designing with fracture mechanics	202
9.10	Recent developments and current research areas	203

viii	Contents	
9.11	Conclusions	205
9.12	References	205
