

CONTENTS

<b>1</b>	<b>Introduction</b>	<b>1</b>
	Glossary and definition of terms	2
	Faults in injection moulded components	9
	Incidence and sources of faults	11
	Significance of faults	13
	Dealing with faults	16
<b>2</b>	<b>Principles of the process</b>	<b>19</b>
	The moulding cycle	20
	Plunger machine layout	23
	Plunger machine operation	23
	Inherent weaknesses	24
	Reciprocating screw machine	29
	Latest trends and developments in machines	32
	Understanding the process	33
	Developments in control systems	35
<b>3</b>	<b>Machines</b>	<b>37</b>
	The power unit	37
	Hydraulic fluid	40
	Hydraulic oil control	42
	Hydraulic pipework	43
	Machine sequencing	43
	Plasticizing unit	45
	Mould unit	52
	Machine specifications	59
	Machine control	61
	Process sequencing	63
<b>4</b>	<b>Materials</b>	<b>65</b>
	Thermosetting and thermoplastic materials	65
	Molecular or fine structure of plastics	66
	Chemical structure of plastics	68
	Polymerization and copolymerization	70
	Crystalline and amorphous plastics	71
	Thermal properties of plastics	75

Effect of pressure on molten plastics	81
Mouldability of molten plastics	82
Rheological properties of plastics	83
<b>5 Moulds</b>	<b>88</b>
Mould-design	89
Mould-making methods	95
Gates for injection moulds	96
Calculation of gate sizes	98
Runner systems for injection moulding	100
‘Family’ moulds	102
Runner dimensions	102
Three-plate and hot runner moulds	102
Extended nozzles	104
Mould cooling systems	105
Differential shrinkage and cooling effects	105
Component design	106
<b>6 The process and its control</b>	<b>108</b>
Determination of injection rate	109
Determination of power requirement	112
Pressure requirements for injection	112
Hydraulic pump	115
Trimming the process	116
Balancing process variables	117
Switching systems and process variables	119
Mechanical systems and process variables	119
Feed setting	120
Interdependence of process variables	121
<b>7 Injection moulding of thermosetting materials</b>	<b>122</b>
Problems with thermosetting materials	122
Machines for thermosetting plastics	123
Thermosetting moulding materials	124
Process details	125
Mould design for thermosetting moulding	127
Faults in thermosetting mouldings	128

<b>8</b>	<b>Causes, diagnosis and cure of faults in injection mouldings</b>	<b>130</b>
	Burn marks	130
	Cracking or crazing	132
	Delamination	132
	Distortion	133
	Flash	133
	Flow marks	134
	Poor surface finish	135
	Scuffing	136
	Short mouldings	136
	Sink marks and voids	138
	Splash marks, mica marks, silvering	139
	Splay marking	141
	Staining	141
	Sticking	142
	Warping	143
	Weld lines	144
	Windows	146
	Witness marks	146
	Other faults and problems	146
<b>9</b>	<b>Housekeeping as a factor in efficiency</b>	<b>149</b>
	Cleanliness	149
	Contamination and water	151
	Safety aspects of housekeeping	153
	Maintenance	156
	Plant interior decoration and colour coding	157
<b>10</b>	<b>Keeping records</b>	<b>159</b>
	Why keep records?	159
	Material balances	163
	Machine operation records	165
	Job records	166
	Mould records	166
<b>11</b>	<b>Factory layout, services and ancillary equipment</b>	<b>168</b>
	Power requirements	168
	Power factor correction	169
	Disposition of machines	169
	Service lines	171

Cooling water supply	172
Mould temperature controllers and chillers	176
Granulating and mixing equipment	177
Hopper loaders	178
Hopper driers	178
General drying equipment	179
Raw material and finished product stores	180
Treatment and care of re-work	181
<b>12 Financial aspects</b>	<b>182</b>
Fixed and variable costs	183
Budgeted machine hourly rates	188
Estimating and pricing of component production	189
Cost saving methods	190
Optimizing time cycle and machine productivity time	193
Effects of process variables on profitability	197
Conclusion	200
Index	203
