

CONTENTS

1. Introduction	1
2. Physical Properties of Polymers	6
3. Mathematical Models for Melt Flow in Extruder Channels	20
4. Solutions of the Extruder Channel Flow Equations	37
5. Power Consumption in Extruders	78
6. Mixing in Extruders	100
7. Screw Cooling	111
8. Over-all Extruder Performance	135
9. Metering Screw Experiments	153
10. Discussion, Application and Conclusions of the Screw Extruder Melt Flow Analysis	202
11. Melt Flow in Wire-coating Dies	218
References	242
Appendixes	
A Numerical Solution of Total Differential Equations	248
B Numerical Interpolation for a Function of One Variable	251
C Isothermal Newtonian Results	254
D Isothermal One-dimensional Power-law Solution for $n = \frac{1}{2}$	255
E Choice of Modifier for Stress Neutral Surface Position Selection	256
F Correction Procedure for the Selection of λ_x and K for Two-dimensional Solutions	257
G Modified Choice of λ for Non-isothermal Solutions	259
H Velocity Profiles and Shape Factors for Isothermal Newtonian Flow in Deep Channels	260
I Finite Difference Procedure for Downstream Flow in Deep Channels	261
J Discussion for Mixing in Three Dimensions	264
K Dimensions Mixing Parameter for Two-dimensional Isothermal Newtonian Channel Flow	267
L Finite Difference Procedure for Heat Transfer in a Cooled Extruder Screw	268
M Numerical Interpolation for Functions of Three Independent Variables	275
Index	275
