668.413 TAD

CONTENTS

1—INTRODUCTION TO PLASTICATING EXTRUSION **1**
1.1 Historical 2
1.2 The Plasticating Extrusion 2

2—BASIC FLOW CONCEPTS **11**
2.1 Introduction 11
2.2 The Equations of Continuity, Momentum, and Energy 11
2.3 Newtonian Fluids 23
2.4 Non-Newtonian Fluids 26
2.5 Effect of Temperature on Flow Properties 35
2.6 Effect of Pressure on Flow Properties 37

3—SCREW GEOMETRY AND BASIC ASSUMPTION **39**
3.1 The Geometry of the Extruder Screw 39
3.2 The Stationary Screw and Rotating Barrel Assumption 45
3.3 The Lubrication Approximation 46
3.4 Fluid Adheres to the Walls 47

4—SOLIDS CONVEYING ZONE **49**
4.1 Introduction 49
4.2 Friction 50
4.3 Conveying Mechanism 52
4.4 Flow Rate 55
4.5 The Force and Torque Balance 58
4.6 Discussion of the Flow Rate Equation 63
4.7 Pressure Profile 67
4.8 Experimental Verification 68

5—MELTING ZONE **79**
5.1 Introduction 79
5.2 Experimental 80
5.3 The Melting Mechanism – Qualitative 85
5.4 The Theoretical Model 107
5.5 The Newtonian Model 111
5.6 Experimental Verification of the Newtonian Model 128
5.7 The Modified Newtonian Model 132
5.8 The Non-Newtonian Model 133

5.9 Power Consumed for Melting 143
5.10 Effect of Flight Clearance on Melting 144
5.11 Effect of Channel Curvature on the Melting Model 146
5.12 Experimental Verification of the Modified Non-Newtonian Model 153
5.13 The Effect of Various Operating Conditions and Screw Geometry on Melting 164

6—MELT CONVEYING ZONE 184
6.1 Introduction 184
6.2 Models Based on Flow in Shallow Prismatic Channels 185
Isothermal Flow of Newtonian Fluids 187
Isothermal Operation of Extruders with Newtonian Fluids 239
Nonisothermal Flow of Newtonian Fluids 252
Isothermal Flow of Non-Newtonian Fluids 267
Nonisothermal Flow of Non-Newtonian Fluids 289
6.3 Theory of Melt Extruders in Deep (Curved) Channels 297
Isothermal Flow of Newtonian Fluids 298
Isothermal Flow of Non-Newtonian Fluids 308

7—MIXING IN EXTRUDERS 332
7.1 Introduction 332
7.2 The Striation Thickness 334
7.3 Residence Time Distribution in Extruders 338
7.4 Total Strain distribution in Extruders 347
7.5 Weighted Average Total Strain 353

8—MATHEMATICAL MODEL FOR PLASTICATING EXTRUDERS 359
8.1 Introduction 359
8.2 Description of the Mathematical Model 361
8.3 The Agreement of Theory to Experiments 365
8.4 A Study of Plasticating Extrusion by Computer Simulations 379

9—EXTRUSION STABILITY AND EXTRUDATE QUALITY 401
9.1 Definition of Extrusion Quality 401
9.2 Steady State Quality 402
9.3 “Unsteady State Quality” 405
9.4 Sources of Fluctuation 411
9.5 Effect of Operating Conditions on Unsteady State Quality 415
9.6 Effect of Screw Geometry on Unsteady Quality 421
9.7 Extruder Stability Theory 425
9.8 Mixing Screws 427

10—EXPERIMENTAL TEMPERATURE AND PRESSURE MEASUREMENT **429**

10.1 Temperature Control 429

10.2 Melt Thermocouples 431

10.3 Theory for the Measurement of polymer Melt Temperature 437

10.4 Pressure Measurement in Extruders 446

11—STATISTICAL ANALYSIS OF THE EXTRUSION PROCESS **450**

11.1 Introduction 450

11.2 Example 454

APPENDIX A: SUMMARY OF VECTOR AND TENSOR NOTATION USED IN CHAPTER 2 464

APPENDIX B: CONSTANTS AND CONVERSION FACTORS 473

APPENDIX C: FLOW PROPERTIES OF SOME POLYMERS 475

APPENDIX D: NOMENCLATURE 480

INDEX 492
