

Contents

1	Plastics and Their Characteristics	11
2	General Introduction to the Analysis of Plastics.	27
2.1	Analytical Procedure	27
2.2	Sample Preparation	28
3	Screening Tests.	30
3.1	Solubility	30
3.2	Density	35
3.3	Behavior on Heating	37
3.3.1	Pyrolysis Tests	39
3.3.2	Flame Tests	40
3.3.3	Melting Behavior	43
4	Testing for Heteroatoms	48
5	Analytical Procedures.	53
Analysis by Groups	54	
Group I	Chlorine- and Fluorine-Containing Plastics.	54
Group II	Nitrogen-Containing Plastics	54
Group III	Sulfur-Containing Polymers.	55
Group IV	Plastics without Heteroatoms.	56
6	Specific Identification Tests	59
6.1	General Identification Reactions	59
6.1.1	Liebermann-Storch-Morawski Reaction	59
6.1.2	Color Reaction with <i>p</i> -Dimethylaminobenzaldehyde	59
6.1.3	The Gibbs Indophenol Test	60
6.1.4	Formaldehyde Test	60

6.2	Specific Plastics	61
6.2.1	Polyolefins	61
6.2.2	Polystyrene	62
6.2.3	Polymethyl Methacrylate	62
6.2.4	Polyacrylonitrile.	63
6.2.5	Polyvinyl Acetate.	64
6.2.6	Polyvinyl Alcohol.	65
6.2.7	Polymers Containing Chlorine.	65
6.2.8	Polyoxymethylene	66
6.2.9	Polycarbonates.	66
6.2.10	Polyamides.	68
6.2.11	Polyurethanes	69
6.2.12	Phenolics	70
6.2.13	Aminoplastics	70
6.2.14	Epoxy Resins.	71
6.2.15	Polyesters.	72
6.2.16	Cellulose Derivatives.	73
6.2.17	Silicones	74
6.2.18	Rubberlike Plastics	74
6.2.19	High Temperature-Resistant (HT) Thermoplastics	76
6.2.20	Fibers.	78
6.3	Polymer Blends	80
6.4	Detection of Metals in Polyvinyl Chloride (PVC)	83
7	Advanced Analytical Methods	86
7.1	Overview	86
7.2	Infrared-Spectroscopy.	89
7.3	IR-Spectra	92
8	Appendix	105
8.1	Plastics Identification Table	105
8.2	Chemicals	118
8.3	Laboratory Aids and Equipment	124
8.4	Guide for Further Reading.	126
8.5	Polymer Acronyms.	127
	Index	135
