

CONTENTS

1 Introduction	1
2 Processing Polyester Resins for Sheet Molding Compounds	5
Overview	5
Equipment	6
Processing Unsaturated Polyesters	10
Finishing the Polyester Resin	12
Determining the Endpoint	12
Blending Polyesters into Styrene	13
Applications of Sheet Molding Composites	14
Resin SG-30	14
General-Purpose Low-Shrinkage Sheet Molding Compounds	16
Structural Sheet Molding Compounds	18
Class “A” SMC	19
Vinyl Ester Resins	22
Conclusions	23
Glossary	26
References	28
Bibliography	28
3 Initiators and Inhibitors: Chemistry and Applications	29
Organic Peroxides	29
Inhibitors	44
Glossary	47
References	47
4 Low-Profile Additives: Shrinkage Control Mechanisms and Applications	49
Low-Profile Technology Development	50
Proposed Mechanisms of Low-Profile Chemistry	56
Thermoplastic Expansion	58
Phasing Effects	69
Chemical Thickening Effects	69
Surface Analysis Techniques	73
References	76

5 Thickening: Mechanisms and Control	79
Basic Chemistry	79
Types of Chemical Thickeners	81
Physical Form	81
Choosing a Thickening Agent	86
Control of Thickening	87
Sources of Variations	89
References	94
6 Fillers	95
Filler Characteristics	97
Ground Limestones	101
Lightweight Fillers	109
Alumina Trihydrate Fillers	112
Anhydrous Calcium Sulfate	112
Barite	113
Kaolin Clays	113
Nepheline Syenite	113
Ground Silicas	113
Filler Surface Treatments	114
References	114
7 Sheet Molding Compound Glass Fibers	117
SMC Fiberglass Processing	122
SMC Fiberglass Quality Characteristics	124
Conclusions	133
Glossary	133
References	135
8 Sheet Molding Compound Rheology	137
Overview of Industrial Rheological Practices	138
The Principal Rheological Techniques	140
Experimental Observations on SMC Rheology	147
Conclusions	159
References	159
9 In-Mold Coating	163
Materials	166
Processing	171
Problems in Common Application	179
Conclusions	179
References	180

10 Bonding of Sheet Molding Compound Panels	181
Ideal Bonding Process	183
Process Model	184
Equation Solution	185
Bonding Process Simulations	186
Adhesive Strength versus Conversion and Temperature	188
Bond Strength Build Rate	190
Conclusions	193
11 Troubleshooting Thought Process	195
Blisters	196
Cobwebbing	197
Contamination	197
Ejector and Surface Cracks (Craze Cracks)	198
Fracture Cracks	198
Dieseling	199
Dull Surface	199
Edge Chips and Fiber Pulls	200
Flow Marks	201
Knit Lines/Flow Lines	201
Laking	202
Nonfill	203
Phasing (Thermoplastic Separation)	204
Porosity	204
Pregel	205
Resin-Rich Area	206
Rib Readout	206
Scumming	207
Shelf-Life Stability	208
Sticking	208
Streaking (Abrasion)	209
Surface Waviness (Ripples)	210
Undercure	210
Whitening	211
Glossary	211
Bibliography	213
12 Parallel Technologies: BMC and ZMC	215
Bulk Molding Compound	215
The Injection Molding of Large Automotive Parts ZMC	218
Conclusions	233
References	233
Addresses of Companies	234

13 Pyrolysis of Sheet Molding Compound Scrap	235
Pyrolysis Process versus Incineration Process	235
SMC Scrap Recycling Processes	236
Process Operation	237
Effect of Increasing Pyrolysis Temperature on the Product Yield	242
Pyrolysis Cost Estimates	243
Other SMC Recycling Methods	245
References	246
 Index	 247
