

CONTENTS

1. Novel Thermosetting Epoxy Resins Based on Pentaerythritol	1
2. Fluorine-Containing Epoxy Components and Plastics	8
3. A Novel Process for Preparing Glycidyl Ester Copolymers	16
4. A Study of Accelerators for Epoxy-Amine Condensation Reaction	29
5. Effect of Hydroxyl Compounds in Reactivity of Epoxy Resins	48
6. The Kinetics of Gelation of Some Accelerated Acid Anhydride Cured Epoxy Resins	60
7. Amine Functional Siloxanes as Epoxy Resin Hardeners	70
8. High Performance Cycloaliphatic Epoxy Resins for Reinforced Structures with Improved Dynamic Flexural Properties	86
9. Dynamic Mechanical Properties of Epoxies Resins for Mechanism	96
10. Some Basic Properties of Carboxy-Terminated Polyisobutylene-Epoxy Resin Systems	108
11. Formulation of an Epoxy Compound for Maximum Moisture Resistance	131
12. Electrodeposition of Surface Coatings. I. Electrochemical Reactions	140
13. Diafoams – New Lightweight Epoxy Foams	150
14. Extracoordinate Siliconate Salts as Latent Epoxy Resin Curing Agents	164
15. The Design Synthesis of Epoxy Resins for Rapid Room Temperature Cures with Primary Amines in Small Masses	173
16. Phosphorus Amide Cured Epoxy Resins. II The Effects of Amide and Curing Conditions on Reactivity	208
Index	225
