

CONTENTS

1. Process Automation: A Rheological and Chemical Overview of Thermoset curing	1
2. Cure Kinetics and Mechanical Properties of a Resin Matrix: Effects of Impurities and Stoichiometry	25
3. Kinetics of Acetylene-Terminated Resin Cure and Its Effects on Dynamic Mechanical Properties	49
4. Acetylene-Terminated Resin Cures: Air and Nitrogen Effects	61
5. Mechanism and Kinetics of the Curing Process in a Resin System	83
6. Moisture-Temperature Effects on the Dynamic Mechanical Properties of Epoxy Polymers	95
7. Cross-linking Reaction of an Epoxy Resin with Phthalic Anhydride	113
8. Chemiluminescence of Thermosetting Resins	121
9. Poly(n-Butyl Methacrylate) and Poly(Butyl Methacrylate-co-Acrylic Acid) Films: Dried from Solutions of Hydrogen Bonding Capability	141
10. Cure of Intaglio Printing Inks	149
11. Curing Behavior of Segmented Polyurethane Adhesives	169
12. Rheological Cure Transformation Diagrams for Evaluating Polymer Cure Dynamics	187
13. Curing Kinetics of Unsaturated Polyester and Vinyl Ester Resins	201
14. Dynamic Mechanical and Dielectric Properties of an Epoxy Resin During Cure	223
15. Reactive Systems—Finite Element Analysis	251
16. Kinetic Model of Cure Reactions: Aids to Property and Processing Predictions	263
17. Thermosetting Coatings—Analytical and Predictive Capability by Chemorheology	281
18. Predictive Models as Aids to Thermoset Resin Processing	301
Index	319
