

CONTENTS

1	Fundamental Considerations	1
1.1	Introduction	1
1.2	Historical background	2
1.3	Guidelines for process selection	5
1.4	Basic characteristics of thermoset moulding materials	5
1.5	Moulding materials—general description	6
1.7	General considerations when moulding thermosetting materials	12
1.8	Product design features	16
2	Preheating	26
2.1	Introduction	26
2.2	High frequency dielectric preheater	28
2.3	Infrared preheater	35
2.4	Screw plasticization	36
2.5	Convection heating	37
2.6	Other methods of prewarming	38
2.7	Pelleting	39
3	Compression Moulding of Thermosetting Materials	40
3.1	Introduction	40
3.2	The process	41
3.3	Compression moulding presses	46
3.4	Classification of moulding types	51
3.5	Mould design	53
3.6	Cooling fixtures or jigs	61
3.7	Deflashing	62
3.8	Automatic compression moulding	63
4	Transfer Moulding	72
4.1	Introduction	72
4.2	Methods of moulding	73
4.3	Transfer moulding process	75
4.4	Inserts	82
4.5	Guidelines for mould design	83
4.6	Transfer moulding machines	90
4.7	Transfer moulding defects and remedies	97

5	Injection Moulding of Thermosetting Plastics	99
5.1	Introduction	99
5.2	Characteristic features of the thermoset injection moulding process	103
5.3	Effect of the properties of the product	113
5.4	Injection moulding of urea and melamine compounds	115
5.5	Advances in machine design and control	116
5.6	Wear problems	122
6	Injection Mould Design	124
6.1	Introduction	124
6.2	Calculation of optimum number of cavities	124
6.3	The feed system	128
6.4	Heating the mould	132
6.5	Temperature control	132
6.6	Ejection	132
6.7	Venting of moulds	136
6.8	Vacuum extraction	137
6.9	Vase histories	139
7	Moulding of Dough Moulding Compounds	148
7.1	Introduction	148
7.2	Comparison of moulding processes	152
7.3	Compression moulding	157
7.4	Transfer moulding	167
7.5	Injection moulding	169
8	Moulding of Sheet Moulding Compounds	186
8.1	Introduction	186
8.2	Presses	190
8.3	Moulding conditions	190
8.4	Mould design	194
	Index	197
