

PDL Fluorocarbon Series Editor's Preface	<i>xv</i>
Preface	<i>xvii</i>
Acknowledgments	<i>xix</i>

1 Fundamentals

1.1 Introduction	1
1.2 The Discovery of Fluoropolymers	1
1.3 What are Fluoropolymers?	2
1.3.1 Perfluorinated Polymers	2
1.3.1.1 Polytetrafluoroethylene (PTFE)	2
1.3.1.2 Fluorinated Ethylene Propylene (FEP) Copolymer	4
1.3.1.3 Perfluoroalkoxy (PFA) Polymers	4
1.3.1.4 Teflon AF@	5
1.3.1.5 Other Fully Fluorinated Polymers	6
1.3.2 Partially Fluorinated Polymers	6
1.3.2.1 Ethylene-Tetrafluoroethylene (ETFE) Copolymers	7
1.3.2.2 Polyvinylidene Fluoride (PVDF)	7
1.3.2.3 Polyvinyl Fluoride (PVF)	8
1.3.2.4 Ethylene-Chlorotrifluoroethylene (E-CTFE) Copolymer	9
1.3.2.5 Chlorotrifluoroethylene (CTFE) Polymers	9
1.3.2.6 Fluoroalkyl Modified Polymers	9
1.3.2.7 Lumiflon [®] , Coraflon [®] , ADS (Air-Dried System), FEVE	10
1.4 Comparison of Fluoropolymer Properties	10
REFERENCES	13

2 Producing Monomers. Polymers. and Fluoropolymer Finishing

2.1 Introduction	15
2.2 Monomers	15
2.2.1 Synthesis of Tetrafluoroethylene	15
2.2.2 Synthesis of Hexafluoropropylene	15
2.2.3 Synthesis of Perfluoroalkylvinylethers	16
2.2.4 Properties of Monomers	16
2.3 Polymerization	17
2.3.1 Polymerization of Homofluoropolymer PTFE	18
2.3.2 Copolymer and Terpolymer Polymerization	20
2.3.3 Core-Shell Polymerization	20
2.3.4 Polymerization in Supercritical Carbon Dioxide	21

2.3.5	Endgroups	21
2.4	Finishing	22
2.4.1	Dispersion Concentration	22
2.4.2	Commercial Dispersions and Properties	23
2.4.3	Fine Powder Production	26
2.4.4	PTFE Micropowder Production	27
2.4.4.1	Production of Fluoroadditives by Electron Beam Irradiation	28
2.4.4.2	Grinding Irradiated PTFE	29
2.4.4.3	Regulatory Compliance	29
2.4.4.4	Commercial Micropowder Products	30
2.4.5	Dispersion Coagulation	33
2.4.6	Spray Drying	33
2.4.7	Spray Sintering	33
REFERENCES	34

3 Introductory Fluoropolymer Coating Formulations

3.1	Introduction	37
3.2	Components of Paint	37
3.3	Important Properties of Liquid Coatings	37
3.3.1	Rheology/Viscosity	38
3.3.2	Weight Solids, Volume Solids	44
REFERENCES	44

4 Binders

4.1	Introduction	45
4.2	Adhesion	45
4.3	Non-Fluoropolymer Binders	46
4.3.1	Polyamidellmide (PAI)	46
4.3.2	Polyethersulfone (PES)	49
4.3.3	Polyphenylenesulfide (PPS)	49
4.3.4	Polyimide (PI)	49
4.3.5	Polyether Ether Ketone (PEEK)	51
4.3.6	Polyetherimide (PEI)	51
4.3.7	Other Less Common Binders	52
4.3.7.1	Acid	52
4.3.7.2	Acrylic	52
4.3.7.3	Phenolic	53
4.3.7.4	Epoxy	53
4.3.7.5	Polyurethane	53
4.3.7.6	Alkyd	54
4.3.7.7	Electroless Nickel Plating	54
4.4	Effect of Temperature on Properties of Binders	55

4.5 Comparison of Properties of Non-Fluoropolymer Binders	56
REFERENCES	58

5 Pigments, Fillers, and Extenders

5.1 Introduction	59
5.2 Dispersion of Pigments	59
5.2.1 Ball or Pebble Milling	60
5.2.2 Shear Process Dispersion	61
5.2.2.1 Media Mills	61
5.2.2.2 High-speed Disperser	62
5.2.2.3 Rotor-Stator	63
5.3 Measuring Dispersion Quality or Fineness	63
5.4 Dispersion Stabilization	64
5.5 Pigment or Particle Settling	65
5.6 Hard and Soft Settling	66
5.7 Functions of Pigments	66
5.7.1 Appearance, Color, Hiding	66
5.7.1.1 Gloss	67
5.7.1.2 Hiding	67
5.7.1.3 Types of Pigments	68
5.7.2 Permeability, Barrier Properties	71
5.7.3 Abrasion Resistance, Reinforcement: Physical Property Improvement	72
5.7.4 Electrically Conductive Fillers	73
5.8 Quantifying Pigment Concentrations in Formulations	75
5.8.1 PIB: PVC	75
5.9 Commercial Pigment Dispersions	75
REFERENCES	76

6 Solvent Systems

6.1 Introduction	77
6.2 Solids-Viscosity Relationships	77
6.3 Viscosity as a Function of Temperature	78
6.4 Evaporation	79
6.5 Solvent Composition and Evaporation Time	80
6.6 Solubility	80
6.7 Surface Tension and Wetting	81
6.8 N-Methyl-2-Pyrrolidone(NMP)	82
6.9 Conductivity	83
6.10 Flash Point and Autoignition	83
6.11 Summary	83
REFERENCES	87

7 Additives

7.1	Introduction	89
7.2	Abrasion Resistance Improvers. Antislip Aids	89
7.3	Acid Catalysts	90
7.4	Acid Scavengers	90
7.5	Adhesion Promoters, Coupling Agents	90
7.6	Algaecides, Biocides, Fungicides	91
7.7	Anti-Cratering Agent, Fisheye Preventer	91
7.8	Anti-Crawling Agent	92
7.9	Anti-Foaming Agent, Defoamer	92
7.10	Anti-Fouling Agent	92
7.11	Rust Inhibitor, Corrosion Inhibitor, Flash Rust Inhibitor	92
7.12	Anti-Sag Agent, Colloidal Additives, Thickeners, Rheology Modifiers	93
7.13	Anti-Settling Agent	93
7.14	Antistatic Agent, Electroconductive Additives	94
7.15	Coalescents, Coalescing Agent, Film Forming Agent	94
7.16	Deaerators	94
7.17	Degassing Agent	94
7.18	Dispersant, Dispersing Agent, or Surfactant	95
7.19	Flattening Agents	95
7.20	UV Absorbers and Stabilizers	95
7.21	Lubricants	95
7.22	Moisture Scavenger	95
7.23	pH Control Agent	97
7.24	Summary	97
	REFERENCES	97

8 Substrates and Substrate Preparation

8.1	Introduction	99
8.2	Substrates	99
8.3	Substrate Preparation	99
8.3.1	Cleaning	99
8.3.2	Increasing Surface Area	100
8.3.2.1	Mechanical Roughening	100
8.3.2.2	Other Methods of Roughening and Cleaning	102
8.3.3	Preventing Rust after Surface Preparation	104
8.3.4	Platings	105
8.3.5	Anodization	105
8.4	Substrate Characterization	106
8.5	Summary	107
	REFERENCES	107

9 Liquid Formulations

9.1	Introduction	109
9.2	Selecting Ingredients	109
9.2.1	Selection of Fluoropolymer	109
9.2.2	Selection of Binder	109
9.3	Recipes and Formulas	109
9.4	Formulating Water-Based Coatings	111
9.4.1	Fluoropolymer Coatings from Raw Dispersion	111
9.4.2	Fluoropolymer Coatings by Dispersion of Powders	112
9.5	Solvent-Based Coatings	113
9.6	Soluble Fluoropolymers	113
9.7	Mixing Liquid Coatings Prior to Use	113
9.8	Filtering/Straining	114
9.9	Shelf Life	116
9.10	Commercial Producers and Their Product Lines	116
9.10.1	Acheson Colloids	117
9.10.2	Whitford Liquid Products	117
9.10.3	Weilburger Coatings (Grebe Group)	118
9.10.4	Akzo Nobel	118
9.10.5	DuPont	118
9.10.6	Mitsui-DuPont Fluorocarbon Liquid Products	118
	REFERENCES	133

10 Application of Liquid Coatings

10.1	Introduction	135
10.2	Liquid Spray Coating Application Technologies and Techniques	135
10.2.1	Conventional Spray Coating	135
10.2.2	High-Volume, Low-Pressure Spray Application	136
10.2.3	Electrostatic Spray Application	136
10.3	Liquid Bulk or Direct Coating Application Techniques	137
10.3.1	Dip Coating	138
10.3.2	Dip-Spin Coating	139
10.3.3	Spin-Flow Coating	140
10.3.4	Curtain Coating	141
10.3.5	Coil Coating	141
10.3.6	Roller Coating	143
10.3.7	Pad Printing	144
10.4	Summary	146
	REFERENCES	146

11 Powder Coating Fluoropolymers

11.1	What is Powder Coating?	147
------	-------------------------------	-----

11.2	Spray Powder Coating Process	147
11.2.1	Corona Charging	149
11.2.2	Tribocharging	150
11.2.3	Powder Coating Advantages and Limitations	151
11.3	Thick Film Coatings	152
11.3.1	Hot Flocking	152
11.3.2	Special Problems with High-Build Coatings	153
11.3.2.1	Decomposition	153
11.3.2.2	Sagging	154
11.3.2.3	Shrinkage	154
11.4	Bulk Application: Fluidized Bed Coating	154
11.5	Commercial Powder Coating Products	156
11.5.1	Preparation of Powder Coating	156
	REFERENCES	162

12 Fluoropolymer Coating Processing Technology

12.1	Introduction	163
12.2	Baking and Curing, Physics or Chemistry	163
12.3	Monitoring Bake	166
12.3.1	Thermocouples	166
12.3.2	Non-Contact Temperature Measurement	167
12.4	Types of Ovens	168
12.4.1	Convection Heating	168
12.4.2	Infrared Baking (IR)	171
12.4.3	Induction Baking	172
	REFERENCES	174

13 Measurement of Coating Performance

13.1	Introduction	175
13.2	Viscosity Measurement	175
13.2.1	Cup Viscosity	175
13.2.2	Brookfield Viscometer	176
13.3	Density, Gallon Weight, or Liter Weight Measurement	177
13.4	Film Thickness	177
13.4.1	Nondestructive Measurement of Film Thickness	177
13.4.1.1	Magnetic Devices	177
13.4.1.2	Eddy Current	178
13.4.1.3	Ultrasound	178
13.4.1.4	Physical Measures of Film Thickness	179
13.4.2	Destructive Film Thickness Tests	180
13.5	Wet Film Build	180
13.6	Adhesion	182

- 13.6.1 Measuring Adhesion. Adhesion Tests 183
 - 13.6.1.1 Post-Boiling Cross-Hatch Tape Adhesion Test 183
 - 13.6.1.2 Post-Boiling Nail Adhesion Test 184
 - 13.6.1.3 Instron Peel Test 185
- 13.7 Environmental Exposure Testing 185
 - 13.7.1 Salt Spray 185
 - 13.7.2 Kesternich DIN 50018 187
 - 13.7.3 Atlas Cell..... 187
- 13.8 Coefficient of Friction (CoF) 188
- 13.9 Abrasion/Erosion 189
 - 13.9.1 Taber 189
 - 13.9.2 Falling Abrasive Test 190
 - 13.9.3 Thrust Washer Abrasion Testing 191
- 13.10 Hardness 192
 - 13.10.1 Pencil Hardness 192
- 13.11 Cure 192
- 13.12 Cookware Testing 192
 - 13.12.1 In-Home Testing 193
 - 13.12.2 Accelerated Cooking Test 193
 - 13.12.3 Mechanical Tiger Paw (MTP) 194
 - 13.12.4 Steel Wool Abrasion Test (SWAT), Sand Paper Abrasion Test (SPAT).... 195
 - 13.12.5 Accelerated In-Home Abuse Test (AIHAT) 195
 - 13.12.6 Blister Test 196
 - 13.12.7 Salt Corrosion Test 196
- 13.13 Summary 196
- REFERENCES 196

14 Recognizing. Understanding. and Dealing with Coating Defects

- 14.1 Introduction 197
- 14.2 Surface Tension and Shear 197
- 14.3 Common Coating Defects 198
 - 14.3.1 Air Entrapment..... 198
 - 14.3.2 Decomposition Bubbles or Foam..... 199
 - 14.3.3 Blisters 199
 - 14.3.4 Pinholing, Popping, or Solvent Popping 199
 - 14.3.5 Mud Cracking, Stress Cracking, and Benard Cells 200
 - 14.3.6 Cratering..... 201
 - 14.3.7 Fisheyes 202
 - 14.3.8 Crawling and Dewetting..... 202
 - 14.3.9 Wrinkling..... 202
- 14.4 Summary 203
- REFERENCES 203

15 Commercial Applications and Uses

15.1 Introduction	203
15.2 A Historical Chronology of Fluoropolymer Finishes Technology	203
15.3 Food Contact	207
15.4 Commercial Applications of Fluorocoatings	208
15.4.1 Housewares: Cookware, Bakeware. Small Electrical Appliances (SEA)	208
15.4.2 Commercial or Industrial Bakeware	208
15.4.3 Fuser Rolls	209
15.4.4 Light Bulbs	210
15.4.5 Automotive	210
15.4.6 Chemical Processing Industry (CPI)	212
15.4.6.1 Chemical Reactors	212
15.4.6.2 Ducts for Corrosive Fumes. Fire Resistance	213
15.4.7 Commercial Dryer Drums	214
15.4.8 Industrial Rollers	214
15.4.9 Medical Devices	215
15.5 Summary	215
REFERENCES	216

16 Health and Safety

16.1 Introduction	217
16.2 Toxicology of Fluoropolymers	217
16.3 Safe Handling and Application of Liquid Fluoropolymer Coatings	217
16.4 Thermal Properties of Fluoropolymers	219
16.4.1 Off-Gases During Baking and Curing	220
16.4.2 Polymer Fume Fever	220
16.5 Removal of Fluoropolymer Films and Coatings	221
16.6 Fire Hazard	222
16.7 Spillage Cleanup	222
16.8 Personal Protective Equipment	222
16.9 Personal Hygiene	223
16.10 Food Contact and Medical Applications	223
16.11 Fluoropolymer Scrap and Recycling	223
16.12 Environmental Protection and Disposal Methods	223
REFERENCES	224

Appendix I: Chemical Resistance of Fluoropolymers

I.1 PDL Chemical Resistance Guidelines	225
12 PDL Resistance Rating	225
Table I.1 PDL Chemical Resistance Ratings	226
13 Chemical Resistance Tables	226
Table 1.2 Chemical Resistance of Polytetrafluoroethylene (PTFE)	227

Table 1.3 Chemical Resistance of Ethylene Chlorotrifluoroethylene Copolymer (ECTFE) 231

Table 1.4 Chemical Resistance of Ethylene Tetrafluoroethylene Copolymer (ETFE) 257

Table 1.5 Chemical Resistance of Fluorinated Ethylene Propylene Copolymer (FEP) 271

Table 1.6 Chemical Resistance of Polychlorotrifluoroethylene(PCTFE) 275

Table 1.7 Chemical Resistance of Perfluoroalkoxy Copolymer (PFA) 287

Table 1.8 Chemical Resistance of Polyvinylidene Fluoride (PVDF) 293

REFERENCE 317

Appendix II: Permeability of Fluoropolymers

II.1 Permeability of Polytetrafluoroethylene (PTFE) 319

112 Permeability of Ethylene Chlorotrifluoroethylene Copolymer (ECTFE) 321

113 Permeability of Ethylene Tetrafluoroethylene Copolymer (ETFE) 325

114 Permeation of Fluorinated Ethylene Propylene Copolymer (FEP) 327

115 Permeability of Polychlorotrifluoroethylene (PCTFE) 332

116 Permeability of Perfluoroalkoxy Copolymer (PFA) 337

117 Permeability of Polyvinylidene Fluoride (PVDF) 338

118 Permeability of Polyvinyl Fluoride (PVF) 345
