

CONTENTS

CHAPTER I. Introduction	1
History of the Synthesis of Polyesters	1
Classification of Polyesters	2
References	10
CHAPTER II. Dependence of the Capacity of Monomers for Polycondensation on their Structure	12
Ways of Obtaining Heterochain Polyesters	12
Types of Polyesterification Reaction	13
Capacity of the Monomers for the Formation of Polyester	15
Functionality of the Starting Materials	17
The Possibility of Ring-Formation	19
Chemical Change of Functional Groups	23
Reference Tables	31
References	65
CHAPTER III. Mechanism of the Polycondensation reaction	72
Definition of Polycondensation	72
The Individual Stages of the Reaction	74
Polycondensation Catalysts	123
The Kinetics of Polyesterification	125
Three-dimensional Polyesterification	134
Mixed Polyesters	141
References	146
CHAPTER IV. Synthesis of Polyesters by Means of the Polycondensation Reaction	153
Influence of the Purity of the Starting Materials	153
Performance of the Polyesterification Reaction in the Melt	154
Performance of Polyesterification in Solution	174
Specific Methods for the Preparation of Polyesters	178
The Purification of Polyesters	183
Characteristics of Polyesters	183
Characteristics of the Starting Materials	191
Reference Tables	202
Properties of the Starting Materials for the Polyesterification Reaction	204
References	210

CHAPTER V. Preparation of Polyesters by Polymerization	214
Preparation of Polyesters by Hydrolytic Polymerization of Cyclic Esters	214
Preparation of Polyesters (and Polyethers) by Polymerization of Unsaturated Esters (and Ethers)	219
Preparation of Polyurethanes by Copolymerization of Polyisocyanates with Polyhydric Alcohols	229
Preparation of Polyamidoesters by Copolymerization of 2,2'-bis-5 (4,4')-Oxazolones with Glycols	235
Reference Tables	236
References	251
CHAPTER VI. The Chemical Properties of Linear Polyesters	255
Reactions of the Ester Group	255
Radical Reactions	267
Reactions of the Terminal Groups	274
Reactions in which the Whole Chain takes part	281
References	287
CHAPTER VII. The Physical Properties of Linear Polyesters	291
Specific Gravity	291
Coefficient of Volumetric Expansion	294
Solubility of Polyesters	295
Viscosity of Solutions	300
Determination of the Molecular Weights of Polyesters	301
Influence of the Molecular Weight on the Properties	310
Fractional Composition	312
Melting Point and Molecular Structure	313
Melting Point and the Structure of the Link	333
Determination of the melting Point	337
The Glass Point (Second-order transition point)	337
Double Refraction	343
The Spectroscopy of Polyesters	344
X-radiography of Polyesters	347
Electronographic Investigation	352
Crystallization	352
Structure of the Crystals	360
Capacity for Crystallization and Structure	362
Orientation on Drawing	367
Mechanical Properties	370
Dielectric Properties	371
References	375

CHAPTER VIII. Individual Representatives of Polyesters and their Use	379
Alkyd Resins	379
Poly (ethylene terephthalate)	384
Polyester Rubbers	415
Unsaturated Polyesters	417
Polymers of Alkyl Esters	422
Polyurethanes	424
Natural Polyesters	427
Nucleic Acids	428
The Use of Polyesters	434
References	437
CHAPTER IX. Polyarylates	448
Methods for the Preparation of Polyarylates	448
Properties of the Polyarylates	474
References	517
AUTHOR INDEX	519
SUBJECT INDEX	533
