

CONTENTS

1. Competitive New Technologies in Polyolefin Synthesis and Materials	1
2. Recent Progress on Single-Single-Site Catalysts	71
3. Synthesis of Monomers by Olefin Metathesis	89
4. Advances in Cycloolefin Polymerization	99
5. Synthesis of Copolymers from Cycloolefins	139
6. Structure of Polyolefins	161
7. Morphology of Polyolefins	175
8. The Glass Transition of Polyolefins	207
9. Crystallization of Polyolefins	223
10. Estimation of Properties of Olefin Monomers and Polymers	249
11. Mechanical Properties and Parameters of Polyolefins	267
12. Electrical Properties	309
13. Rheological and Optical Properties and Parameters	321
14. Solution Characterization of Polyolefins	359
15. Thermodynamic Properties of Polyolefin solutions	379
16. General Survey of the Properties of Polyolefins	401
17. Degradation and Decomposition	413
18. Biocompatibility and Biodeterioration of Polyolefins	477
19. Controlled-Lifetime PO Materials	493
20. Additives for Polyolefins	517
21. Special Additives: blowing Agents, Flame-Retardants, pigments, Fillers, and reinforcements	561
22. Polyolefin Polyblends	613
23. Compatibilization of Polyolefin Polyblends	633
24. Surface Modifications of Polyolefins by Gas-Phase Methods	649
25. Polyolefin Composites: Interfacial Phenomena and Properties	689
26. Functionalized Polyolefins: Synthesis and Application in Blends and Composites	723
27. Polyolefin Fibers	773
28. Technological Aspects of Additive Use for Polyolefin Fiber Production	825
29. Technological Aspects of Additives Use for Thermoplastic and Elastomeric Polyolefins	841
30. Quality Control of Processed Thermoplastic Polyolefins	897
31. Balance of Processability, Performance, and Marketability in Metallocene Polyolefins	919
Appendix	
1. Suppliers and Manufacturers of Polyolefins and Polyolefin Products	929
2. Suppliers and Manufacturers of Additives for Polyolefins	957
Index	1003
