

CONTENTS

1 Introduction	1
1.1 General	
1.2 Historical	
1.3 Present status of the industry	
1.4 Future developments	
References	
2 Raw materials for polyamides	10
2.1 Introduction and terminology	
2.2 Economics	
2.3 Feedstocks and intermediates	
References	
3 Basic chemistry and manufacture of polyamides	26
3.1 Classification and nomenclature	
3.2 Direct stepwise polymerisation	
3.3 Ring scission polymerisation – hydrolytic and anionic polymerisation	
3.4 Other stepwise polymerisation mechanisms	
3.5 Other commercial nylons – mechanisms and technical manufacture	
3.6 Polyamides from aromatic diamines	
3.7 Copolyamides	
3.8 Cyclic oligomers	
3.9 preparative methods, based on physico-chemical principles used	
3.10 Molecular weight control	
References	
4 Properties of polyamides	55
4.1 Chemical properties	
4.2 Mechanical properties of dry polyamides	
4.3 Moisture absorption and its effect on mechanical properties	
4.4 Physical properties	
References	

5 Conversion processes	145
5.1 General	
5.2 Injection moulding	
5.3 Extrusion	
5.4 Melt spinning	
5.5 Casting	
5.6 Powder processing	
5.7 Machining and finishing operations	
References	
6 Applications of polyamides	188
6.1 General	
6.2 Mechanical applications	
6.3 Electrical applications	
6.4 Chemical applications	
6.5 Miscellaneous applications	
6.6 Choice of production method	
6.7 Applications of modified polyamides	
References	
7 Characterisation, analysis and testing of polyamides	205
7.1 Features characterised	
7.2 Methods of characterisation	
7.3 Identification and analysis	
7.4 Testing for quality, type and design	
References	
Index	227
