

CONTENTS

1 INTRODUCTION	1
1.1 Preparation of Poly(vinyl alcohol)	1
1.2 Properties and Estimation of PVA	6
References	7
2 MOLECULAR STRUCTURE OF PVA	9
2.1 Molecular Weight	9
2.1.1 Fractionation of PVA	9
2.1.2 Molecular weight distribution	10
2.1.3 Intrinsic viscosity	10
2.1.4 Intrinsic viscosity – molecular weight relationships for aqueous solutions	12
2.1.5 Molecular dimension; behavior in aqueous solution	13
2.1.6 Behavior in solvents other than pure water	16
2.1.7 Concluding remarks	16
2.2 Tacticity	17
2.2.1 Tacticity determination through n.m.r. methods	17
2.2.2 Proton magnetic resonance of PVA	18
2.2.3 Nuclear magnetic resonance spectra of poly (vinyl esters)	20
2.2.4 Significance of tacticity to other properties	21
2.3 1,2-Glycol Units	24
2.4 Carbonyl Groups	26
2.4.1 Simple carbonyl groups	26
2.4.2 Conjugated carbonyl groups	28
2.4.3 Concluding remarks	30
2.5 Infrared Spectrum of PCA	31
References	35
3 PROPERTIES IN THE SOLID STATE	38
3.1 Crystallinity	38
3.1.1 Introduction	38
3.1.2 Crystal structure and crystallinity	39
3.1.3 Density and crystallinity	41
3.1.4 Single crystals and crystallinity	42

3.2	Effect of Heat on Common Poly (vinyl alcohol)	43
3.2.1	Melting point and glass transition in general	43
3.2.2	Transitions in poly(vinyl alcohol)	44
3.2.3	The melting of PVA	47
3.2.4	Latent heat of fusion of PVA	48
3.2.5	Hydrogen bonding and entropy of fusion of PVA	50
3.2.6	Heat capacity of PVC	51
3.3	Diverse Properties of the Solid	51
3.3.1	Elastic modulus	51
3.3.2	Dielectric properties	52
3.3.3	Miscellaneous bulk properties	52
3.4	Conclusion	52
	References	54
4	PROPERTIES IN ASSOCIATION WITH WATER	57
4.1	Small Quantities of Water	57
4.1.1	Sorption of Water	57
4.1.2	Permeation of PVA by water	58
4.1.3	Glass transition	60
4.1.4	Deuterium exchange	60
4.2	Common PVA and Its Solution in Water	60
4.2.1	The process of dissolution	60
4.2.2	Densities of solutions	61
4.2.3	Refractive indices of solutions	62
4.2.4	Diffusion	63
4.2.5	Surface phenomena of PVA solutions	63
4.3	Behavior of PVA in Aqueous Salt Solutions	64
4.4	Concentrated Aqueous Solutions and Gels	65
4.4.1	Introduction	65
4.4.2	Formation and melting of aqueous gels of PVA	66
4.4.3	Aging of concentrated PVA solutions	68
4.4.4	Stress relaxation in aqueous PVA gels	69
4.4.5	Nonaqueous gels	69
4.4.6	Aqueous gels containing a third hydrogen-bonding component	70
4.5	Chemically Crosslinked Aqueous Gels of PVA and the PVA-Iodine Complex	71
4.5.1	Diverse examples of crosslinking	71
4.5.2	Gelling by dibasic inorganic acids	73
4.5.3	PVA-iodine complexes	74
	References	77

5	CHEMICAL PROPERTIES	81
5.1	Thermal Decomposition, Dehydration, and Oxidation	81
5.1.1	Effect of heat on PVA	81
5.1.2	Dehydration of PVA	83
5.1.3	Oxidation by chemical reagents	85
5.2	Radiation Effects	86
5.3	Esters of PVA	89
5.3.1	Esters with carboxylic acids	89
5.3.2	Sulfate and xanthate	90
5.3.3	Nitrate	90
5.3.4	Borate	91
5.3.5	Phosphate and phosphonate	91
5.3.6	Sulfonate esters	92
5.4	Ethers of PVA	92
5.5	Acetals of PVA	93
5.5.1	Acetalation by simple aldehydes	93
5.5.2	Acetalation for the introduction of functional groups	96
5.6	Miscellaneous Chemical Reactions	97
	References	99
6	USES AND TECHNOLOGY	103
6.1	General Review	103
6.2	PVA Fibers	105
6.2.1	Manufacture of fibers	106
6.2.2	Materials from PVA fibers	107
6.2.3	PVA in textile size and finisher	107
6.3	PVA Film, Membrane and Sponge	108
6.3.1	PVA film	108
6.3.2	Uses of PVA involving optical effects	109
6.3.3	PVA membranes	110
6.3.4	PVA sponge	111
6.4	PVA Used on Surfaces	112
6.4.1	Adhesives	112
6.4.2	Coatings	113
6.4.3	Paints	113
6.5	uses in Solution	114
6.5.1	Stabilization of colloids	114
6.5.2	Miscellaneous uses	116

6.6 Medicinal Properties	116
6.6.1 Exterior application	116
6.6.2 Ingestion	117
6.6.3 Injection into tissue	117
6.6.4 Injection into the blood-stream	119
Author Index	125
Subject Index	133
