Face to the Second Edition

Preface to the First Edition

Acknowledgements

Chemistry and Basic Intermediates
Introduction
Basic Chemistry
Basic Structure of a Polyurethane Elastomer
Synthesis of Basic Urethane Building Blocks
  Isocyanates
  Storage Life and Reactions of Isocyanates with Themselves—Dimers (Uretidinediones)
Uretidiones
Polyols
Polyesters
Polyethers
Chain Extenders and Crosslinking Agents
Catalysts

2. Polyurethane Elastomer Chemistry
Liquid Processing Routes
Millable Elastomer Synthesis
Thermoplastic Linear Urethane Elastomers
Concept of Equivalent Weights
Concept of the Complete Urethane Chemical System
  Polyol Quantization by Chemical Analysis
  Other Isocyanate Analytical Terms
  Other Useful Terms
  Example Calculation for a Typical Polyurethane Elastomer Synthesis
Blends
Calculation of Isocyanate Proportions for a Water Blow Foam System
Effect of Flexible to Rigid Segment on Urethane Properties
CONTENTS

3. Property–Structure Relationships in Polyurethanes
   Introduction
   Flexible Segments
   Polyethers
   Polycaprolactones
   Rigid Segments
   Aliphatic Versus Aromatic Diisocyanates
   Aliphatic Diisocyanates and Transparency
   Effect of Diisocyanate Structure on the Relative Thermal Stability of Polyurethane Elastomers
   Chain Extension of Unsymmetrical Diisocyanates
   Glycols
   Chain Extension of Symmetrical Diisocyanates with Diols
   Synthesis
   Even Molar Ratio Effects
     Influence of the Diol Structure on Thermal Stability of the PU Elastomer: Molar Ratios 1:2:1
     Loss Tangent Values and Chain Extender Composition
     Uneven Molar Ratio Effects with Respect to the Diisocyanate
     Comparison of the Thermal Stability Effects of a Diamine with Diols (as Chain Extenders) in Polyurethane Elastomers (Molar Ratio 1:3:2)
     Differential Scanning Calorimetry (DSC) as a Means of Predicting Thermal Stability (Molar Ratio 1:2:1)
     DSC Studies and the Molar Ratio 1:2.6:1
     DSC as a Means of Predicting the Relative Thermal Stability of a Diamine (Polacure) with Diol Chain Extenders
     Contribution of Crosslinks to Properties
     Crosslinking and Thermal Stability in Polyurethane Elastomers
     Synthesis Technique
     In-Situ Isocyanate and Isocyanurate Crosslinking
     PU Elastomer Compositions
     Influence of % Free NCO on the Properties of the PU Elastomer at Room Temperature
     Strength Properties at Elevated Temperature
     Dynamic Mechanical Thermal Analysis (DMTA)
     Thermal Equilibrium Properties
     Low Temperature Stiffening and Glass Transition Temperature ($T_g$)
     Hazards
     Thermal Stability and Crosslink Structure in PUs
     Structure in Polyurethane Elastomers
     Continued Crystal Growth
     Plasticization

4. Reaction Rates, Catalysis and Surfactant
   Reaction Rates
     Diisocyanates
     Polyols
     Temperature
CONTENTS

Catalysis ........................................ 113
Acid Catalysis and Prepolymer Stability (Shelf Life) ........ 113
Shelf Life Stability of Prepolymers ..................... 113
Base Catalysis ................................... 115
Additional Comments on RIM Catalysis ................. 117
Tertiary Amines .................................. 117
Organometallic and Other Metal Compounds .......... 118
Catalyst Combinations ............................. 120
Surfactants (Surface Active Agents) ................ 120
  Ionic Surfactants ................................ 120
  Non-ionic Surfactants ............................ 120

5. Liquid Polyurethane Elastomer Systems .................... 122
Stable Prepolymer Systems ........................................ 124
  Simple Hand Casting Procedure ..................... 125
  Chain Extenders ................................. 127
  Processing of TDI Prepolymers .................... 129
  Processing Variables ............................. 131
  Type of Curative ................................ 132
  Reaction Temperature ............................ 134
  Other Representative Polymer Systems ............ 135
Unstable Prepolymer System ........................................ 152
Water Crosslinked Millable Vulkollan for Compression Moulding 158
Cellular Polyurethane Elastomers ......................... 158
  Vulkollan System ................................ 158
  Cellular Urethanes from Stable Prepolymers .... 159
  Solvents ........................................ 160
Compression Moulding of Cast Elastomers ............ 161
Spray Application of Urethane Elastomers ......... 163
Note on Water Content of Polypols of Urethane Elastomers 164
Alternative Chain Extenders to MOCA .................. 165
  3,3'-Dimethyl-4,4'-diaminodicyclohexylmethane .... 166
  Diols as Chain Extenders ........................ 167
Synthesis and Properties of Polyurethane Elastomers Based on Aromatic
  Versus Aliphatic Diisocyanates .................. 169
CHDI Prepolymer Synthesis and Chain Extension .......... 169
PPDI Prepolymer Synthesis and Chain Extension .......... 171

6. Reaction Injection Moulding (Liquid Injection Moulding) .......... 174
  The Process ...................................... 178
  RIM Formulation ................................ 179
  Water .......................................... 181
Physical Properties of RIM Urethane Systems ........ 182
RIM Machine Design ................................ 182
Energy Requirements of RIM ........................ 186
Mechanism of Impingement Mixing ...................... 187
Mould Design ..................................... 187
  Transition Zone ................................ 189
CONTENTS

Catalysis
  Acid Catalysis and Prepolymer Stability (Shelf Life) 113
  Shelf Life Stability of Prepolymers 113
  Base Catalysis 115
  Additional Comments on RIM Catalysis 117
  Tertiary Amines 117
  Organometallic and Other Metal Compounds 118
  Catalyst Combinations 120
  Surfactants (Surface Active Agents) 120
  Ionic Surfactants 120
  Non-ionic Surfactants 120

Liquid Polyurethane Elastomer Systems 122
  Stable Prepolymer Systems 124
    Simple Hand Casting Procedure 125
    Chain Extenders 127
    Processing of TDI Prepolymers 129
    Processing Variables 131
    Type of Curative 132
    Reaction Temperature 134
    Other Representative Polymer Systems 135
  Unstable Prepolymer System 152
  Water Crosslinked Millable Vulkollan for Compression Moulding 158
  Cellular Polyurethane Elastomers 158
    Vulkollan System 158
    Cellular Urethanes from Stable Prepolymers 159
    Solvents 160
  Compression Moulding of Cast Elastomers 161
  Spray Application of Urethane Elastomers 163
  Note on Water Content of Polyps of Urethane Elastomers 164
  Alternative Chain Extenders to MOCA 165
    3,3'-Dimethyl-4,4'-diaminodicyclohexylmethane 166
    Diols as Chain Extenders 167
  Synthesis and Properties of Polyurethane Elastomers Based on Aromatic
    Versus Aliphatic Diisocyanates 169
    CHDI Prepolymer Synthesis and Chain Extension 169
    PPDI Prepolymer Synthesis and Chain Extension 170

6. Reaction Injection Moulding (Liquid Injection Moulding) 174
  The Process 178
  RIM Formulation 179
    Water 181
  Physical Properties of RIM Urethane Systems 182
  RIM Machine Design 182
  Energy Requirements of RIM 186
  Mechanism of Impingement Mixing 187
  Mould Design 187
    Transition Zone 190
CONTENTS

Moulding
Ribs and Radius
Runners
Mould Sealing
Processing Economics
Reinforced Reaction Injection Moulding Machinery
Dispersion of Fibre Reinforcement

7. Millable Polyurethane Elastomers
Sulphur Vulcanized Grades
Millable Polyether Polyurethane Elastomers
Plasticization
Filler Reinforcement
Isocyanate-Cured Urethane Rubber
Peroxide-Cured Polyurethane Elastomers
  Cure Temperature
  Effect of Fillers
  Combined Peroxide and Diisocyanate Cures

8. Polyurethane Adhesives
Reasons for Adhesive Properties of Polyurethane and Diisocyanate-Based Adhesives
  Isocyanate Reactivity
  Self Polymerization
  Surface Wetting Properties
  Polarity
  Graded Physical Properties
  Reaction with Unreactive Surfaces
Reasons for the Apparent Universal Applications of Polyurethanes as Adhesives
Methods of Using Isocyanates as Adhesives
  As an Isocyanate Primer
  By In-Situ Polyurethane Polymerization
  As Polyurethane Elastomer Without or With Added Polyisocyanates
Thermoplastic Polyurethane Elastomer Types
Elastomer Gum Types
Blocked Di- or Polyisocyanate Adhesives
Aqueous Dispersions of Polyurethanes
Film and Tape Polyurethane Adhesives
Powdered Polyurethane
Stabilization of Adhesives

9. Thermoplastic (Linear Polyurethane Elastomers)
Partially Crosslinked Thermoplastic Polyurethanes
Synthesis of Thermoplastic Polyurethane
  Preparation
  Notes on Large-Scale Production Synthesis Procedures
Processing of Thermoplastic Polyurethanes

Hydroxyl Number
Primary and Secondary Hydroxyl Groups
Water Content
Acid Number
Measurement of pH (Apparent)
Hydrolytic Stability
Unsaturation
Peroxide Content
General Analytical Parameters for Polyols
Infrared Spectroscopy Techniques
Determination of Isomer Ratio of TDI by Infrared Spectroscopy
Determination of Unreacted NCO Groups in a Polyurethane Elastomer
An Additional Rapid Infrared Method for the Quantitative Analysis of NCO Present in a Polyurethane Elastomer
Chromatography Techniques
Gas–Liquid Chromatography
Thin Layer Liquid Chromatography
Thermal Analysis
Identification of the Components in a Polyurethane
Polyesters
Polyethers
Differentiation of Polymers Present in a Polyurethane
General Analysis of Miscellaneous Elements in a Polyurethane Elastomer
Colour Reactions for Polyurethane Identification

12. Special Types of Polyurethane Elastomers
Hydroxy-Terminated Polybutadienes
Process Oils and Plasticizers
Low-Temperature Resistance
Transparent Polyurethane Elastomers
Amine-Terminated Polyols
Fluorinated Polyols
UV Light Curable PU Systems

13. Properties and Applications
Tensile Properties
In Tension
In Compression
Load Deflection Properties
Comparison of Physical Properties of Polyurethane Elastomers with Common Rubbers and Plastics
Energy Absorption Properties
Wear Resistance
Friction Properties
Environmental and Ageing Properties
Light Resistance
High Energy Radiation Effects
Electrical Properties
