

CONTENTS

1. Introduction	3
2. Preparation of ABS	4
2.1 Emulsion Polymerisation	4
2.2.1 Emulsion Polymerisation Processes	5
2.2.2 Copolymer Composition and Particle Morphology Control	5
2.2 Mass Polymerisation	6
2.3 Mass/Suspension Polymerisation	7
2.4 Emulsion/Mass Polymerisation	7
2.5 Emulsion/Suspension Polymerisation	7
2.6 On-line Monitoring of the Polymerisation Processes	7
2.7 Mathematical Models	8
3. Analysis and Characterisation	8
4. ABS Processing	9
4.1 Compounding	10
4.2 Moulding	10
4.3 Recycle and Re grind	10
5. Physical and Mechanical Properties	10
5.1 Physical Properties	11
5.2 Morphology	11
5.3 Structure and property Relationships	11
5.4 Deformation Mechanisms	13
5.5 Mechanical Properties	13
5.6 Low Strain Rate Stress-Strain Behaviour	13
5.7 Impact Behaviour	14
5.8 Fracture Toughness	14
5.9 Fatigue	15
5.10 Dynamic Mechanical Spectroscopy	15
5.11 Rheology	15

6. Stabilisation of ABS and Related Materials	15
6.1 Thermooxidative and Photooxidative Degradation	16
6.2 Degradation by Ozone	16
6.3 Approaches to Increasing ABS Stability	16
6.3.1 Additives	17
6.3.2 Use of Alternative Rubbers	17
6.3.3 Protective Laminates	17
7. Specialty Grades	18
7.1 High Heat Grades	18
7.2 Chemical Resistance	18
7.3 Flame Retardant Grades	18
7.4 Clear ABS	18
7.5 Plating Grades	18
7.6 Filled ABS	18
8. Blends with ABS	19
8.1 Polycarbonate/ABS Blends	20
8.2 Nylon/ABS Blends	20
8.3 ABS/Thermoplastic Polyurethane Blends	21
8.4 ABS/Poly(vinyl Chloride) Blends	21
9. Conclusion	21
Acknowledgements	21
Additional References	22
