

CONTENTS

1. Introduction	1
1. Historical development	2
2. Present state of polypropylene	5
2. Raw materials (olefins)	10
1. Production statistics and properties	10
2. Manufacture	12
3. Polymerization	14
1. Stereoregularity	14
2. Forces of stereoregulation	16
3. Catalyst systems	17
4. Mechanism of polymerization with Ziegler – Natta catalysts	19
5. Kinetics of polymerization	21
6. Active site, absolute rate, life time	24
7. Copolymerization	26
8. Polymerization process	29
4. Polypropylene properties	36
1. Dilute solution properties; molecular weight and molecular weight distribution	36
2. Crystalline properties	47
3. Thermal, mechanical, and rheological properties	58
4. Chemical and biological properties	79
5. Modification of polypropylene	86
1. Chemical modification	86
2. Irradiation	88
3. Degradation and stabilization	90
4. Copolymers and polyblends	91
6. Processing	101
1. Melt blending	101
2. Extrusion	102
3. Injection molding	111
4. Blow molding	114
5. Miscellaneous processing methods	114

7. Applications	116
1. Pipes, rods, profiles, and wire coating	116
2. Sheets	117
3. Film	117
4. Filament and fibers	119
5. Injection molded and blow molded articles	120
List of producers and trade names	122
Author index	125
Subject index	131
