## CONTENTS

Editor's Preface	v
Preface	vii
<b>1 The Monomers</b>	<b>1</b>
<b>2 Polymerization</b>	<b>8</b>
1. Introduction	8
2. Ziegler-Natta Polymerizations	10
Initiators and procedure	10
Effect of polymerization variables	15
Three-component catalyst systems	20
Mechanistic considerations	25
3. Miscellaneous Polymerizations	31
<b>3 Crystalline Structure and Transformations</b>	<b>39</b>
1. Preparation and Identification of Polymorphs	39
2. Transformation of Modification II to I	47
3. Additional Crystalline Transformations	51
4. Relative Stabilities of the Polymorphs	55
<b>4 Transitions in the Amorphous Phase</b>	<b>61</b>
<b>5 Solution Properties</b>	<b>68</b>
<b>6 Mechanical Behavior</b>	<b>79</b>
<b>7 Reactions of Poly(1-Butene)</b>	<b>87</b>
1. Peroxidation, Halogenation and Halosulfonation	87
2. Crosslinking and Degradation	94
<b>8 Copolymers of 1-Butene</b>	<b>99</b>
1. Statistical Copolymers	99
Copolymers with x-olefins	99
Miscellaneous copolymerizations	107
2. Block and Graft Copolymers	108
Author Index	115
Subject Index	120
