

CONTENTS

I	Introduction	1
1	The Common Ground	3
2	Colloid Science Applied to Emulsion Polymers	7
3	Polymer Concepts	19
4	Processing Emulsion Polymers	35
II	The Monomers	59
5	Vinyls	61
6	Styrenes	71
7	Acrylates and Methacrylates	79
8	Diene Monomers	87
9	Curing Monomers	93
10	Waterborne Condensation Polymers	103
11	By-Products in the Latex	109
III	Analysis and Testing	115
12	Class-I Tests for Emulsion Polymer Systems	119
13	Class-II Test for Special Problems	131
14	Analyses	171
IV	Additives for Postpolymerization Compounding	189
15	Colloidal Stabilizers	191
16	Rheology Modifiers	201
17	Plasticizers, Cosolvents, and Coalescents	207
18	Curatives	223
19	UV and Heat Stabilizers	233
20	Biocides	237
21	Filler, Pigments, and Reinforcing Agents	247
	Author Index	261
	Subject Index	269
