

## CONTENTS

**CHAPTER A. THEORETICAL CONSIDERATIONS**

I. Polydispersity of High Polymers	1
II. Phase Relations for Polydisperse Systems	5
III. Fractionation Theory	10
IV. Fractionation Efficiency	27
References	41

**CHAPTER B.1 FRACTIONAL PRECIPITATION**

I. Nonsolvent Addition Method	44
II. Fractionation by Solvent Evaporation	58
III. Fractionation by Cooling	61
References	65

**CHAPTER B.2 FRACTIONAL SOLUTION**

I. Introduction	67
II. Theoretical Considerations	69
III. Experimental Methods	74
IV. Factors in Column Elution – Guiding Principles for Experimental Fractionation	82
V. Comparison between Fractional Solution Methods	89
VI. Possible Areas for Future Research	90
References	92

**CHAPTER B.3 CHROMATOGRAPHIC FRACTIONATION**

I. Introduction	95
II. Apparatus	97
III. Column Operation	106
IV. Specific Fractionations	109
V. Theoretical Considerations and Comparison with Other Methods	109
VI. Preparatory-Scale Fractionation	118
References	120

**CHAPTER B.4 GEL PERMEATION CHROMATOGRAPHY**

I. Introduction	123
II. History of Gel Permeation Chromatography	127
III. The Theory of Gel Permeation Chromatography	130
IV. The Gels	147
V. Experimental Techniques	158
VI. Evaluation of Data	169
References	173

## **CHAPTER B.5 THERMAL DIFFUSION**

I. History	181
II. Basic Theory	182
III. Studies of the Variables	183
IV. Polymer Fractionations	186
V. Methods of Fractionation	188
References	189

## **CHAPTER C.1 TURBIDIMETRIC TITRATION**

I. Introduction	191
II. Outline of the Method and Range of Application	193
III. Elaboration of the Method	195
IV. Apparatus	199

## **CHAPTER C.2 SEDIMENTATION**

I. Introduction	251
II. Theory	252
III. Experimental	255
IV. Sedimentation Velocity	258
V. Sedimentation Equilibrium	276
References	282

## **CHAPTER C.3 ISOTHERMAL DIFFUSION**

I. Introduction	285
II. Theory: The Differential Equation of Diffusion and Three Solutions	286
III. Experimental Methods for the Determination of Diffusion Constants	287
IV. Theory: Determination of Molecular Heterogeneity	289
V. Methods for the Determination of the Diffusion Coefficient Distribution	301
VI. Experimental Results	303
VII. Critical Remarks	304
References	305

## **CHAPTER C.4 SUMMATIVE FRACTIONATION**

I. The Summative Method	307
II. Mathematical Interpretation of Summative Data	309
III. Precipitating Power of Varying Compositions of Acetone-Water Precipitants	311
References	315

<b>CHAPTER C.5 RHEOLOGICAL METHODS</b>	
I. Introduction to the Problem	317
II. Parameter Methods	318
III. Evaluation of Flow Curves	321
IV. Evaluation of Relaxation Measurements	332
V. Miscellaneous Methods	335
References	336
<b>CHAPTER D. CHEMICAL INHOMOGENEITY AND ITS DETERMINATION</b>	
I. Causes for the Chemical Inhomogeneity of Macromolecular Compounds	341
II. Determination of Chemical Inhomogeneity	344
III. Quantitative Description of Chemical Inhomogeneity	356
IV. Literature Survey	362
References	371
<b>CHAPTER E. TREATMENT OF DATA</b>	
I. Introduction	379
II. Methods of Expressing Molecular Weight Distribution	380
III. Calculation of Molecular Weight Distribution from Fractionation Data	387
IV. Calculation of Molecular Weight Distribution from Average Molecular Weight Measurements	400
V. Comparison of Methods	402
Appendix: Numerical Illustrations	405
References	412
<b>CHAPTER F. THE NUMERICAL</b>	
I. Introduction	415
II. On the Prediction of Molecular Weight Distributions from Kinetic Schemes	418
III. Numerical Methods in the Handling of Molecular Weight Distribution data	438
Appendix to Chapter F	452
References	459
<b>CHAPTER G. ADDITIONAL METHODS OF FRACTIONATION</b>	
Text	461
References	464
Appendix to Chapter G	465
References to Appendix	488
AUTHOR INDEX	499
SUBJECT INDEX	523
