

## CONTENTS

<b>Chapter 1:</b> The Thermo-oxidative Degradation of Isotactic Polypropylene	1
Kinetics and Mechanism of Hydroperoxide Decomposition in Polypropylene	2
<b>Chapter 2:</b> Concerning the Mechanism of Antioxidant Action	34
Fundamental Stages in Inhibited Oxidation	34
Mechanism of Action of Strong Antioxidants	36
Weak Antioxidants	38
Synergism	43
Influence of the Conversion Products of Antioxidants	44
Effect of carbon Black	45
Structure of Antioxidant and Polyolefin	46
<b>Chapter 3:</b> Mechanochemical Process in Polymers	48
Effects of Intensive Mechanical Stresses (Milling)	50
Development of Chemical Reactions during Polymer Fatigue	59
Development of Chemical Processes during the Abrasion (Wear) of Rubber	61
Development of Chemical Processes in Cross-linked Polymers under Static Load	62
Development of Polymers (Mechanical Rupture)	76
<b>Chapter 4:</b> The Ageing and Stabilisation of Heterochain Polyesters	85
Thermal Ageing of Polyesters	86
Thermo-oxidative Ageing	96
Stabilisation of Polyesters against Thermal and Thermo-oxidative Ageing	99
Ageing of Polyesters in UV Light	102
Stabilisation of Polyesters against UV Light	112
Radiation-Chemical Transformations of Polyesters	116
<b>Chapter 5:</b> The Stabilisation of Synthetic Rubbers	128
Basic Requirements of Stabilisers for Synthetic Rubbers	136
Methods of Evaluating the Stability of Synthetic Rubbers and the Effectiveness of Stabilisers	141
Stabilisation of the Principal Types of Synthetic Rubbers	143

<b>Chapter 6:</b> The Inhibition of Thermo-oxidative Processes by means of Compounds Containing Conjugated Double Bond Systems	162
Some Characteristic Properties of Compounds Containing Conjugated Double Bond Systems	162
The Inhibition of Thermo-oxidative Reactions by some Compounds Containing Systems of Conjugated Systems	188
Stabilisation of some Polymer by Compounds with Conjugated Systems	192
<b>Chapter 7:</b> Phosphor-Organic Stabilisers for Polymers	210
Normal Esters of Phosphorus Acid	211
Mixed Esters of Phosphorous Acid	216
Polyphosphites	224
Reactivity of Phosphorous Acid Ester and the Mechanism of their Inhibiting Activity	228
<b>Chapter 8:</b> The Use of Nuclear Magnetic Resonance in the Study of the Ageing and Stabilisation of Polymers	244
Investigation of Changes in Structure and Molecular Motion when Polymers Age	246
Investigation of the Low Molecular Products of Polymer Degradation	256
Study of the Relationship between Structure and Efficiency of Stabilisers	259
General References and Abstracts	263
Glossary I	273
Glossary II	275
Index	277
