

## CONTENTS

<b>1 Introduction</b>	<b>1</b>
<b>2 Properties of fibres</b>	<b>8</b>
1 Introduction	8
2 Glass fibres	12
3 Production	13
3a Production variables	16
4 Mechanical properties and structure of single filaments	18
4a Experiments of Bartenev and co-workers	19
4b Experiments of Metcalfe and Schmitz	25
5 Static fatigue	29
5a Static fatigue in bulk glass	29
5b Theories of static fatigue	39
5c Static fatigue in glass fibres	44
6 Strength of industrial glass fibres	46
7 Asbestos	47
8 Other reinforcements	50
<b>3 Resins</b>	<b>51</b>
1 Introduction	51
2 Unsaturated polyesters	53
3 Epoxy resins	54
4 High temperature polymers	60
5 The glass transition	65
6 The mechanical properties of amorphous polymers	69
6a Small strains	69
6b Large strains	74
<b>4 Resin-fibre interface</b>	<b>82</b>
1 Surface treatment of fibres	82
2 Experiments of Zisman and Bascom	85
3 Weak boundary layers	89

<b>5 Properties of the composite</b>	<b>91</b>
1 Resin shrinkage	91
2 Voids	96
3 Strain magnification	102
3a Continuous fibres	102
3b Fibres of finite length	107
4 Fracture under mechanical forces	110
4a Theory of Rosen	111
4b Experiments of Bouc	114
5 Strength of the resin-fibre interface	119
6 Phenomenological criteria of failure	121
7 Time effects	123
7a Fatigue	123
7b Creep and stress relaxation	124
7c High rates of strain	124
8 Influence of water on the mechanical properties of glass fibre reinforced plastics	124
8a Attack of water on the resin	125
8b Attack of water on the interface	126
References	127
Appendix	140
