

CONTENTS

Introduction and Overview	vii
<u>CHAPTER 1</u>	
Economics, Markets and Supply Trends of Plastic Packaging Films	1
Market Trends	1
Monomer Supply	3
Polymer Supply (Markets)	6
Domestic Packaging Film Markets	7
Economics	11
<u>CHAPTER 2</u>	
Oriented Packaging Films	15
Historical Development	15
Theory Stress Induced Orientation	16
<u>CHAPTER 3</u>	
Orientation Techniques	19
General Approaches	19
Crystallin Polymers	21
Bubble Process	23
Tenter Process	24
Process Comparison	28
Non-Crystallin Polymers	28
<u>CHAPTER 4</u>	
Technology of Commercial Shrink Films, Stretch Films and Laminates	31
Vinylidene Chloride Polymers	31
Polystyrene (OPS)	33
Polypropylene (OPP)	37
History and Overview	37
Mono-axial Orientation	39
Biaxial Orientation	39
Resin Properties	46
Molecular Weight	46
Polymer Structure	47
Additives	47

Metallized OPP Film Laminates	48
Commercial Significance OPP and its laminates	49
Background	49
Uncoated OPP Films	50
Modified Uncoated OPP	50
Saran Coated OPP Films	51
Heat Seal Coated OPP	51
Acrylic Coated OPP	51
Markets for OPP Laminates and Products	51
Future of OPP	54
Poly (ethylene terephthalate) PET	55
Market Overview	55
Technology and Properties	56
Application of Polyester Films and Laminates in Packaging	57
Vinyl Chloride Polymers and Copolymers	60
Overview	60
Processes and Applications	61
Methods of Sheet and Film Manufacturers, a comparison	65
Irradiated Polyethylene	67
High Density Polyethylene (HDPE)	68
Markets and Supply	68
Shrink Film Potential	69
New Developments	71
Background and Motivation	72
New Materials	72
New Equipment	73
Summary and Future	74
Low Density Polyethylene and Copolymers	74
Low Density Polyethylene	74
Overview	74
Structure and Processability	76
Package Integrity	78
Linear Low Density Polyethylene	80
Historical Development	80
Structure and Properties	82
New LLDPE Technology	85
Impact of Technology	85
Applications	88
Conversion Costs and Efficiency	89
LDPE/Vinyl Copolymers	92

EVA Stretch Films	92
Ethylene – Methacrylate Acid Copolymers	93
Ethylene – Methacrylate	95
Rubber Hydrochloride	95
Polybutene (OPB)	95
Nylon Film (ON)	96
Metallized Nylon Film Laminates	97

CHAPTER 5

Properties of Heat-Shrinkable Films	99
Degree of Shrink	101
Shrink Tension	102
Shrink Temperature	102
Shrink Mechanisms	104
Amorphous Polymers	104
Crystallizable Polymers	107
Orientation effects	108

CHAPTER 6

Film and Laminates and Their Markets	111
General Markets	111
Polypropylene	112
PVC Film	113
Polyethylene Films	114
Polystyrene (OPS)	115
Other Films	115
Engineered Films	116
Relationship Between Polymer and Film	117
Produce	118
Fresh Meat	119
Fresh Fish	123
Cured and Cooked Meat	124
Frozen Foods	125
Dairy Foods	126
Bakery Goods	126
Bags and Sacks	127
Boxed Goods	132
Bundling	133

CHAPTER 7

Shrink vs. Stretch (A Problem of Economics and Energy)	135
Overview	135
Today and Tomorrow	136
Shrink Packaging	137
Wrappers	137
Shrink Tunnels	137
Stretch Wrapping	137
Advantages and Disadvantages	138
Stretch Film Packaging	139

CHAPTER 8

Non-Packaging Application	141
Construction	141
Industrial Chemicals	141

CHAPTER 9

Coextrusion	143
Technology	143
New Materials	144
Markets – Applications	145
Economics	147

CHAPTER 10

Comparison of Commercially Available Shrink Films	149
Shortcomings of Shrink Films	151
Cost	151
Machinability	151

CHAPTER 11

Economic Evaluation of Shrink Film Processes and Products	155
Amortized Cost	155
Material Costs	156
Labor and Overhead	156
Services	156

CHAPTER 12

Future Outlook	159
General Comments	159
Raw Materials	161
Supply and Costs	162
Capacity and Growth	163
Technology Changes	165
Packaging Systems	166
Speed	166
Energy	167
Cost	167
