

CONTENTS

1	Polymerization: an overview	1
1.1	Step Polymerization	1
1.2	Chain Polymerization	4
1.3	Further reading	10
2	Molecular weight and molecular weight distribution	18
2.1	Average molecular weight	21
2.2	Molecular weight distribution	24
2.3	Network formation by non-linear polymers: branching and crosslinking: gelation	38
2.4	Further reading	56
3	Molecular weight determination	60
3.1	End-group analysis	60
3.2	Colligative methods for M_N	61
3.3	Solution viscosity	69
3.4	Light scattering for M_W	77
3.5	Molecular weight distribution from chromatography	83
3.6	Further reading	86
4	Polymerization: Kinetics and mechanism	96
4.1	Step polymerization	96
4.2	Free radical chain polymerization	100
4.3	Chain copolymerization	120
4.4	Ionic polymerizations	135
4.5	Coordination copolymerization	150
4.6	Further reading	151
5	Three dimensional architecture: conformation and stereochemical configuration	155
5.1	Conformation: the for of bond rotation in determining molecular shape	155
5.2	Stereochemical configuration: the role of stereochemistry in determining molecular shape	172
5.3	Further readings	185

6	The statistical behavior of conformationally disordered chains	188
6.1	Characteristic ratio	188
6.2	Long phantom chains, the Gaussian coil	199
6.3	The freely jointed chain: the distribution function for an exactly treatable model	207
6.4	Excluded volume	216
6.5	Further reading	219
7	The interacting bond model for the average properties of coiling chains	228
7.1	The partition function and scalar averages for a one dimensional chain with interacting bonds	228
7.2	Averaging of a matrix and matrix products	235
7.3	The Characteristic ratio of long uniform chains	239
7.4	The Characteristic ratio of finite chains	240
7.5	Illustrative calculations, the three-state chain	243
7.6	Some example of calculations on actual chains	250
7.7	Further reading	264
8	Rubber elasticity	266
8.1	Thermodynamics	266
8.2	classical molecular theory of rubber elasticity	274
8.3	Experimental behavior	290
8.4	Further development of molecular theory	300
8.5	The chemistry of crosslinking	310
8.6	Structures of elastomers	321
8.7	Further reading	327
9	Solutions	330
9.1	Regular solutions of simple non-electrolytes	330
9.2	Phase behavior	332
9.3	Mean-field lattice theory for polymer (Flory – Huggins model)	336
9.4	Experimental behavior of polymer solutions and the Flory – Huggins model	339
9.5	The semi-dilute regime	348
9.6	The dilute regime	354
9.7	Equation-of-state theories	365
9.8	More rigorous extensions of theory	384
9.9	Further reading	387
	Index	406
