

CONTENTS

PART ONE MATERIALS

1	The nature of plastic and composites	3
	Introduction	3
	Atoms, elements and molecules	4
	Plastics and Polymers	5
	Homopolymers and copolymers	7
	Thermoplastics and thermosetting plastics	7
	Amorphous thermoplastic and the glass transition temperature (T _g)	8
	Crystalline thermoplastic and the crystalline melting point (T _m)	9
	Molecular orientation	11
	Additives in polymers	12
	Polymer blends	12
	Composites	13
	Polymer-based structural composites	13
2	Survey of major plastics materials	16
	ABS polymers	18
	Acetal polymers	20
	Aminoplastics	22
	Dough moulding compound	24
	Phenolic plastics	25
	(Aliphatic) polyamide homopolymers	27
	Polybutylene terephthalate	29
	Polycarbonate	31
	Polyether ketone and polyether ether ketone	33
	Polyethylene	35
	Polyethylene terephthalate	37
	Polymethyl methacrylate	39
	Polypropylene	41
	Modified PPO	43
	Polyphenylene sulphide	45
	Polystyrene	47
	Polysulphone	49
	Polytetrafluoroethylene and tetrafluoroethylene-hexafluoropropylene copolymer	51
	Polyvinyl chloride	53
	Unsaturated polyester resin	55

3	Simple identification system	57
	Introduction	57
	Procedure	58
	Confirmatory tests and more extensive analysis	59

PART TWO PROCESSING

4	Processing fundamentals	63
	The shaping operation	63
	The effect of polymer properties on process technique	64
5	Major processing methods	73
	Injection moulding	73
	Extrusion	85
	Blow moulding	94
	Calendering	98
	Thermoforming	101
	Reaction moulding	105
	Mixing	109
	Process potential	112
6	Trouble shooting guide	114
	Injection moulding	114
	Blow moulding	117
	Compression moulding	119
	Extrusion	120
	Vacuum forming	121
	Calendering	122
7	Product design principles and problems	124
	Characteristics of plastics materials	124
	Polymer rigidity and effect of temperature on rigidity	125
	Toughness	126
	Creep	129
	Persistent design problems	130
	Further reading	133

PART THREE CONTROL

8	Standardized testing	137
	Reasons for standardized testing	137
	Standard conditions	137
	Some selected properties	140
	Some standard tests	144
9	Statistics and quality control	145
	Introduction	145
	Scatter of experimental results	145
	Confidence limits	147
	Pareto analysis	148
	Specification and tolerance limits	149
	Quality control charts	149
	Quality assurance	152

PART FOUR USEFUL DATA

	Standardized units of measurement and their conversion	155
	Temperature conversions and saturated steam pressures	158
	Atomic symbols and atomic weights	160
	Common names and abbreviations for plastic	162
	Density and specific gravity of polymers	165
	Heat stability of polymers	167
	Flame retardancy of polymers	169
	Glass transition temperature and melting point	171
	Scales of hardness	173
	Solubility parameters	175
	Heating and cooling requirements of thermoplastic melts	179
	Thermal data relevant to determination of cooling times	181
	Moulding shrinkage data	182
	Some values for the flow path ratio of injection moulding materials	184
	Electric circuit and wiring diagram symbols	185
	Hydraulic symbols	186
	Flow formulae	188
	Databases	190

Appendix 1	Specimen calculations for processors	191
Appendix 2	Health and safety and the law	199
Appendix 3	Sources of further information	202
Index		206
