

CONTENTS

CHAPTER 1 PRINCIPLES AND METHODOLOGY OF PRODUCT TESTING	1
Introduction	1
Principles of Polymer Science	2
Characterization of Structural Properties	8
Rheological Responses of Polymers	12
General Properties and Uses of Elastomers	22
Philosophy and General Concepts of product Development	64
Notation	78
References	79
CHAPTER 2 CHARACTERIZATION OF MOLECULAR WEIGHT AND MOLECULAR WEIGHT DISTRIBUTION	80
Introduction	80
Determination of Number-Average Molecular Weight	82
Determination of Weight-Average Molecular Weight	90
Determination of Molecular Size	96
Characterization of Molecular Weight Distribution	102
Notation	113
References and Suggested Readings	114
CHAPTER 3 THERMAL ANALYSIS OF POLYMERS	116
Introduction	116
Thermal Behavior Properties	116
Measurement Techniques	122
Differential Thermal Analysis	125
Differential Scanning Calorimetry	129
Measurement of Thermal Conductivity	141
Notation	144
References and Suggested Readings	146
CHAPTER 4 MEASUREMENT OF STRESS-STRAIN PROPERTIES	147
Introduction	147
Hardness	148
Stress-Strain Properties and Testing	151
Compression Stress-Strain, Shear Stress-Strain, and Flexural Stress-Strain	
Concepts	162

Tear and Impact Testing	169
General Comments on Short-Term Stress-Strain Properties	175
Static and Dynamic Property Behavior	175
Fatigue Testing	187
Notation	194
Suggested Readings	195
CHAPTER 5 PROCESSABILITY TESTING	197
Introduction	197
Viscoelastic Properties of Polymers	198
Description of Conventional Viscometers	213
Application of Capillary Rheometry to Processing Predictions	241
Principles of Torque Rheometry	261
The Oscillating Disk Rheometer	307
Notation	309
References	311
CHAPTER 6 QUALITY IN PRODUCT DEVELOPMENT	313
Introduction	313
Philosophy of Quality and Its Relation to the Marketplace	314
Market Research on Quality	317
General Principles of Quality Control	332
Closure	355
References and Suggested Readings	360
CHAPTER 7 BASIC DEFINITIONS IN PROBABILITY AND STATISTICS	364
The Importance of Frequency Distributions	364
The Normal Frequency Distribution	368
Basic Definitions and Theorems of Probability	368
Principle of Duality, Random Experiments, and Probability	371
Combinatorial Analysis, Counting, and Tree Diagrams	376
Permutations, Binomial Coefficients and Stirling's Approximation	378
Definitions of Random Variables and Probability Distributions	381
Important Theorems of Random Variables and Probability Distributions	390
Principles of Geometric Probability	392
Suggested Readings	393

CHAPTER 8 APPLICATION OF QUALITY CONTROL TECHNIQUES	394
Frequency Distributions	394
Sampling Inspection Philosophy	430
Notation	436
References	437
CHAPTER 9 DESIGN OF EXPERIMENTS AND APPLICATION TO PRODUCT DESIGN	438
Basic Definitions and Terminology	468
Statistics Basics for Experimentation Strategy	445
Screening Design	474
Response Surface Concepts and Construction of Polynomial Models	481
Application to Product Development	500
Notation	511
References and Suggested Readings	511
Appendix A Glossary of Plastics and Engineering Terms	513
Appendix B General Properties and Data on Elastomers and Plastics	529
Index	561
