

CONTENTS

Chapter 1 – General Properties of Plastics

1.1	Introduction	1
1.2	Polymeric Materials	2
1.3	Plastics Available to the Designer	5
1.4	Selection of Plastics	18

Chapter 2 – Mechanical Properties of Plastics – Deformation

2.1	Introduction	41
2.2	Viscoelastic Testing of Plastics	42
2.3	Short-Term Testing of Plastics	43
2.4	Long-Term Testing of Plastics	44
2.5	Design Methods for Plastics Using Deformation Data	46
2.6	Mathematical Models of Viscoelastic Behaviour	57
2.7	Deformation Behaviour of Reinforced Plastics	80

Chapter 3 – Mechanical Properties of Plastics – Fracture

3.1	Introduction	109
3.2	The Concept of Stress Concentration	110
3.3	Energy Approach to Fracture	111
3.4	Stress Intensity Factor Approach to Fracture	117
3.5	General Fracture Behaviour of Plastics	121
3.6	Creep Failure of Plastics	124
3.7	Fatigue of Plastics	128
3.8	Impact Behaviour of Plastics	140

Chapter 4 – Processing of Plastics

4.1	Introduction	146
4.2	Extrusion	155
4.3	Injection Moulding	184
4.4	Thermoforming	205
4.5	Calendering	210
4.6	Rotational Moulding	215
4.7	Compression Moulding	218
4.8	Transfer Moulding	221
4.9	processing Reinforced Thermoplastics	221
4.10	Processing Reinforced Thermosets	222

Chapter 5 – Analysis of Polymer Melt Flow	
5.1 Introduction	234
5.2 General Behaviour of Polymer Melts	235
5.3 Isolation Flow in Channels: Newtonian Fluids	237
5.4 Isolation Flow in Channels: Non-Newtonian Fluids	243
5.5 Isolation Flow in Non-Uniform Channels	246
5.6 Elastic Behaviour of Polymer Melts	252
5.7 Residence and Relaxation Times	256
5.8 Power used to Extrude a Polymer Melt	258
5.9 Experimental Methods used to Obtain Flow Data	258
5.10 Analysis of Flow During Processing	266
Appendix A – Structure of Plastics	294
Appendix B – Solutions to Questions	306
Index	351
