<i>Preface to First Edition</i>	7
<i>Preface to Second Edition</i>	9
<i>Preface to Third Edition</i>	11
1 The historical development of plastics materials	1
2 The chemical nature of plastics	16
3 States of aggregation in polymers	36
4 Relation of structure to thermal and mechanical properties	53
5 Relation of structure to chemical properties	70
6 Relation of structure to electrical and optical properties	100
7 Additives for plastics	112
8 Principles of the processing of plastics	143
9 Principles of product design	168
10 Polyethylene	182
11 Aliphatic polyolefins other than polyethylene, and diene rubbers	218
12 Vinyl chloride polymers	248
13 Fluorine-containing polymers	300
14 Poly(vinyl acetate) and its derivatives	317
15 Acrylic plastics	328
16 Plastics based on styrene	347
17 Miscellaneous ethenoid thermoplastics	380
18 Polyamides and polyimides	392
19 Polyacetals and related materials	423
20 Polycarbonates	446
21 Other thermoplastics containing p-phenylene groups	469
22 Cellulose plastics	486
23 Phenolic resins	509
24 Aminoplastics	542
25 Polyester resins	569
26 Epoxide resins	598
27 Polyurethanes and polyisocyanurates	631
28 Furan resins	656
29 Silicones and other heat-resisting polymers	660
30 Miscellaneous plastics materials	697
<i>Index</i>	721
