<i>Preface to Fifth Edition</i>	v
<i>Preface to First Edition</i>	vi
1 The Historical Development of Plastics Materials	1
1.1 Natural Plastics	1
1.2 Parkesine and Celluloid	3
1.3 1900–1930	4
1.4 The Evolution of the Vinyl Plastics	5
1.5 Developments since 1939	6
1.6 Raw Materials for Plastics	9
1.7 The Market for Plastics	10
1.8 The Future for Plastics	14
2 The Chemical Nature of Plastics	19
2.1 Introduction	19
2.2 Thermoplastic and Thermosetting Behaviour	23
2.3 Further Consideration of Addition Polymerisation	24
2.3.1 Elementary kinetics of free radical addition polymerisation	28
2.3.2 Ionic polymerisation	33
2.4 Condensation Polymerisation	37
3 States of Aggregation in Polymers	39
3.1 Introduction	39
3.2 Linear Amorphous Polymers	39
3.2.1 Orientation in linear amorphous polymers	43
3.3 Crystalline Polymers	45
3.3.1 Orientation and crystallisation	48
3.3.2 Liquid crystal polymers	49
3.4 Cross-linked Structures	50
3.5 Polyblends	52
3.6 Summary	54
4 Relation of Structure to Thermal and Mechanical Properties	56
4.1 Introduction	56
4.2 Factors Affecting the Glass Transition Temperature	56
4.3 Factors Affecting the Ability to Crystallise	61
4.4 Factors Affecting the Crystalline Melting Point	67

x **Contents**

4.5	Some Individual Properties	69
4.5.1	Melt viscosity	69
4.5.2	Yield strength and modulus	70
4.5.3	Density	70
4.5.4	Impact strength	70
5	Relation of Structure to Chemical Properties	72
5.1	Introduction	72
5.2	Chemical Bonds	72
5.3	Polymer Solubility	75
5.3.1	Plasticisers	82
5.3.2	Extenders	84
5.3.3	Determination of solubility parameter	85
5.3.4	Thermodynamics and solubility	88
5.4	Chemical Reactivity	90
5.5	Effects of Thermal, Photochemical and High Energy Radiation	91
5.6	Agng and Weathering	94
5.7	Diffusion and Permeability	95
5.8	Toxicity	98
5.9	Fire and Plastics	99
6	Relation of Structure to Electrical and Optical Properties	105
6.1	Introduction	105
6.2	Dielectric Constant, Power Factor and Structure	105
6.3	Some Quantitative Relationships of Dielectrics	112
6.4	Electronic Applications of Polymers	114
6.5	Electrically Conductive Polymers	115
6.6	Optical Properties	115
7	Additives for Plastics	118
7.1	Introduction	118
7.2	Fillers	120
7.2.1	Coupling agents	122
7.3	Plasticisers and Softeners	125
7.4	Lubricants and Flow Promoters	126
7.5	Anti-aging Additives	128
7.5.1	Antioxidants	128
7.5.2	Antiozonants	137
7.5.3	Stabilisers against dehydrochlorination	137
7.5.4	Ultra-violet absorbers and related materials	137
7.6	Flame Retarders	139
7.7	Colourants	143
7.8	Blowing Agents	144
7.9	Cross-linking Agents	147
7.10	Photodegradants	147
8	Principles of the Processing of Plastics	150
8.1	Introduction	150
8.2	Melt Processing of Thermoplastics	151
8.2.1	Hygroscopic behaviour	152
8.2.2	Granule characteristics	153
8.2.3	Thermal properties influencing polymer melting	153
8.2.4	Thermal stability	154
8.2.5	Flow properties	155
8.2.5.1	Terminology	156

8.2.5.2	Effect of environmental and molecular factors on viscous flow properties	159
8.2.5.3	Flow in an injection mould	162
8.2.5.4	Elastic effects in polymer melts	163
8.2.6	Thermal properties affecting cooling	165
8.2.7	Crystallisation	167
8.2.8	Orientation and shrinkage	167
8.3	Melt Processing of Thermosetting Plastics	169
8.4	Processing in the Rubbery State	171
8.5	Solution, Suspension and Casting Processes	173
8.6	Summary	174
9	Principles of Product Design	176
9.1	Introduction	176
9.2	Rigidity of Plastics Materials	176
9.2.1	The assessment of maximum service temperature	178
9.2.1.1	Assessment of thermal stability	178
9.2.1.2	Assessment of softening point	179
9.3	Toughness	181
9.3.1	The assessment of impact strength	184
9.4	Stress–Strain–Time Behaviour	186
9.4.1	The WLF equations	188
9.4.2	Creep curves	190
9.4.3	Practical assessment of long term behaviour	191
9.5	Recovery from Deformation	192
9.6	Distortion, Voids and Frozen-in Stress	193
9.7	Conclusions	195
10	Polyethylene	196
10.1	Introduction	196
10.2	Preparation of Monomer	198
10.3	Polymerisation	198
10.3.1	High pressure polymerisation	198
10.3.2	Ziegler processes	200
10.3.3	The Phillips process	200
10.3.4	Standard Oil Company (Indiana) process	201
10.3.5	Processes for making linear low density polyethylene	201
10.4	Structure and Properties of Polyethylene	202
10.5	Properties of Polyethylene	207
10.5.1	Mechanical properties	207
10.5.2	Thermal properties	210
10.5.3	Chemical properties	213
10.5.4	Electrical properties	216
10.5.5	Properties of LLDPE and VLDPE	217
10.6	Additives	217
10.7	Processing	221
10.8	Polyethylenes of Low and High Molecular Weight	227
10.9	Cross-linked Polyethylene	227
10.10	Chlorinated Polyethylene	229
10.11	Applications	230
11	Aliphatic Polyolefins other than Polyethylene, and Diene Rubbers	235
11.1	Polypropylene	235
11.1.1	Preparation of polypropylene	236
11.1.2	Structure and properties of polypropylene	237

xii *Contents*

11.1.3	Properties of isotactic polypropylene	240
11.1.4	Additives for isotactic polypropylene	245
11.1.5	Processing characteristics	247
11.1.6	Applications	250
11.1.7	Atactic polypropylene	253
11.1.8	Chlorinated polypropylene	253
11.2	Polybut-1-ene	254
11.2.1	Atactic polybut-1-ene	254
11.3	Polyisobutylene	255
11.4	Poly-(4-methylpent-1-ene)	255
11.4.1	Structure and properties	256
11.4.2	General properties	257
11.4.3	Processing	258
11.4.4	Applications	258
11.5	Other Aliphatic Olefin Homopolymers	259
11.6	Copolymers Containing Ethylene	260
11.7	Diene Rubbers	264
11.7.1	Natural rubber	268
11.7.2	Synthetic polyisoprene (IR)	272
11.7.3	Polybutadiene	273
11.7.4	Styrene-butadiene rubber (SBR)	274
11.7.4.1	High styrene resins	277
11.7.5	Nitrile rubber (NBR)	277
11.7.6	Chloroprene rubbers (CR)	278
11.7.7	Butadiene-pentadiene rubbers	279
11.8	Thermoplastic Diene Rubbers	280
11.9	Aliphatic Olefin Rubbers	282
11.9.1	Thermoplastic polyolefin rubbers	285
11.10	Rubbery Cyclo-olefin (Cyclo-alkene) Polymers	286
11.10.1	Aliphatic polyalkenamers	286
11.10.2	Polynorbornene	288
11.10.3	Chlorine-containing copolymers	289
11.11	1,2-Poly butadiene	289
12	Vinyl Chloride Polymers	291
12.1	Introduction	291
12.2	Preparation of Vinyl Chloride	293
12.3	Polymerisation	294
12.4	Structure of Poly(vinyl chloride)	297
12.4.1	Characterisation of commercial polymers	299
12.5	Compounding Ingredients	305
12.5.1	Stabilisers	305
12.5.2	Plasticisers	310
12.5.3	Extenders	314
12.5.4	Lubricants	314
12.5.5	Fillers	318
12.5.6	Pigments	318
12.5.7	Polymeric impact modifiers and processing aids	319
12.5.8	Miscellaneous additives	322
12.5.9	Formulations	323
12.6	Properties of PVC Compounds	325
12.7	Processing	327
12.7.1	Plasticised PVC	327
12.7.2	Unplasticised PVC	330
12.7.3	Pastes	331
12.7.4	Copolymers	335

	Contents	xiii
12.7.5	Latices	335
12.8	Applications	336
12.9	Miscellaneous Products	338
12.9.1	Crystalline PVC	339
12.9.2	Chlorinated PVC	339
12.9.3	Graft polymers based on PVC	340
12.9.4	Vinyl chloride-propylenecopolymers	340
12.9.5	Vinyl chloride-N-cyclohexylmaleimide copolymers	341
13	Fluorine-containing Polymers	343
13.1	Introduction	343
13.2	Polytetrafluoroethylene	344
13.2.1	Preparation of monomer	344
13.2.2	Polymerisation	344
13.2.3	Structure and properties	345
13.2.4	General properties	346
13.2.5	Processing	349
13.2.6	Additives	351
13.2.7	Applications	351
13.3	Tetrafluoroethylene-Hexafluoropropylene Copolymers	352
13.4	Tetrafluoroethylene-Ethylene Copolymers (ETFE)	353
13.5	Polychlorotrifluoroethylene Polymers (PCTFE) and Copolymers with Ethylene (ECTFE)	353
13.6	Poly(vinyl fluoride) (PVF)	355
13.7	Poly(vinylidene fluoride)	355
13.8	Perfluoroalkoxy Polymers	356
13.9	Hexafluoroisobutylene-Vinylidene Fluoride Copolymers	357
13.10	Fluorine-containing Rubbers	357
13.11	Miscellaneous Fluoropolymers	361
14	Poly(vinyl acetate) and its Derivatives	363
14.1	Introduction	363
14.2	Poly(vinyl acetate)	363
14.2.1	Preparation of the monomer	363
14.2.2	Polymerisation	365
14.2.3	Properties and uses	365
14.3	Poly(vinyl alcohol)	366
14.3.1	Structure and properties	367
14.3.2	Applications	368
14.4	The Poly(vinyl acetals)	368
14.4.1	Poly(vinyl formal)	369
14.4.2	Poly(vinyl acetal)	370
14.4.3	Poly(vinyl butyral)	370
14.5	Ethylene-Vinyl Alcohol Copolymers	371
14.6	Poly(vinyl cinnamate)	371
14.7	Other Organic Vinyl Ester Polymers	373
15	Acrylic Plastics	374
15.1	Introduction	374
15.2	Poly(methyl methacrylate)	376
15.2.1	Preparation of monomer	376
15.2.2	Polymerisation	377
15.2.3	Structure and properties	380
15.2.4	General properties of poly(methyl methacrylate)	381
15.2.5	Additives	384

15.2.6	Processing	385
15.2.7	Applications	387
15.3	Impact Resistant Methyl Methacrylate Polymers	388
15.4	Nitrile Resins	390
15.5	Acrylate Rubbers	391
15.6	Thermosetting Acrylic Polymers	392
15.7	Acrylic Adhesives	393
15.8	Hydrophilic Polymers	393
15.9	Poly(methacrylimide)	394
15.10	Miscellaneous Methacrylate and Chloroacrylate Polymers and Copolymers	394
15.11	Other Acrylic Polymers	396
16	Plastics Based on Styrene	398
16.1	Introduction	398
16.2	Preparation of the Monomer	399
16.2.1	Laboratory preparation	399
16.2.2	Commercial preparation	400
16.3	Polymerisation	402
16.3.1	Mass polymerisation	402
16.3.2	Solution polymerisation	403
16.3.3	Suspension polymerisation	404
16.3.4	Emulsion polymerisation	405
16.3.5	Grades available	405
16.4	Properties and Structure of Polystyrene	406
16.5	General Properties	406
16.6	High-Impact Polystyrenes (HIPS) (Toughened Polystyrenes (TPS))	410
16.7	Styrene–Acrylonitrile Copolymers	413
16.8	ABS Plastics	413
16.8.1	Production of ABS materials	414
16.8.2	Processing of ABS materials	418
16.8.3	Properties and applications of ABS plastics	419
16.9	Miscellaneous Rubber-modified Styrene–Acrylonitrile and Related Copolymers	420
16.10	Butadiene–Styrene Block Copolymers	421
16.11	Miscellaneous Polymers and Copolymers	422
16.12	Stereoregular Polystyrene	424
16.13	Processing of Polystyrene	425
16.14	Expanded Polystyrene	426
16.14.1	Structural foams	429
16.15	Oriented Polystyrene	430
16.16	Applications	432
17	Miscellaneous Vinyl Thermoplastics	436
17.1	Introduction	436
17.2	Vinylidene Chloride Polymers and Copolymers	436
17.2.1	Properties and applications of vinylidene chloride–vinyl chloride copolymers	438
17.2.2	Vinylidene chloride–acrylonitrile copolymers	440
17.3	Coumarone–Indene resins	442
17.4	Poly(vinyl carbazole)	444
17.5	Poly(vinyl pyrrolidone)	445
17.6	Poly(vinyl ethers)	446
17.7	Other Vinyl Polymers	446

18	Polyamides and Polyimides	448
18.1	Polyamides: Introduction	448
18.2	Intermediates for Aliphatic Polyamides	450
18.2.1	Adipic acid	450
18.2.2	Hexamethylenediamine	450
18.2.3	Sebacic acid and Azelaic acid	451
18.2.4	Caprolactam	452
18.2.5	ω -Aminoundecanoic acid	453
18.2.6	ω -Aminoanthric acid	453
18.2.7	Dodecanelactam	455
18.3	Polymerisation for Aliphatic Polyamides	455
18.3.1	Nylons 46 , 66 , 69,610 and 612	456
18.3.2	Nylon 6	456
18.3.3	Nylon 11	456
18.3.4	Nylon 12	457
18.3.5	Nylon 7	457
18.4	Structure and Properties of Aliphatic Polyamides	457
18.5	General Properties of the Nylons	460
18.6	Additives	466
18.7	Glass-filled Nylons	467
18.8	Processing of the Nylons	469
18.9	Applications	471
18.10	Polyamides of Enhanced Solubility	474
18.11	Other Aliphatic Polyamides	476
18.12	Aromatic Polyamides	477
18.12.1	Glassclear polyamides	478
18.12.2	Poly-m-xylylene adipamide	481
18.12.3	Aromatic polyamide fibres	482
18.13	Polyimides	484
18.14	Modified Polyimides	489
18.14.1	Polyamide-imides	492
18.14.2	Polyetherimides	493
18.15	Elastomeric Polyamides	494
19	Polyacetals and Related Materials	497
19.1	Introduction	497
19.2	Preparation of Formaldehyde	498
19.3	Acetal Resins	499
19.3.1	Polymensation of formaldehyde	499
19.3.2	Structure and properties of acetal resins	502
19.3.3	Properties of acetal resins	504
19.3.4	Processing	508
19.3.5	Additives	509
19.3.6	Acetal-polyurethane alloys	510
19.3.7	Applications of the acetal polymers and copolymers	510
19.4	Miscellaneous Aldehyde Polymers	511
19.5	Polyethers from Glycols and Alkylene Oxides	512
19.5.1	Elastomeric polyethers	513
19.6	Oxetane Polymers	514
19.7	Polysulphides	517
20	Polycarbonates	521
20.1	Introduction	521
20.2	Production of Intermediates	522
20.3	Polymer Preparation	523
20.3.1	Ester exchange	523

20.4	Relation of Structure and Properties	526
20.4.1	Variations in commercial grades	528
20.5	General Properties	530
20.6	Processing Characteristics	537
20.7	Applications of Bis-phenol A Polycarbonates	539
20.8	Alloys based on Bis-phenol A Polycarbonates	541
20.9	Commercial Copolymers Based on Bis-phenol A Polycarbonates	541
20.10	Miscellaneous Carbonic Ester Polymers	542
21	Other Thermoplastics Containing <i>p</i>-Phenylene Groups	546
21.1	Introduction	546
21.2	Polyphenylenes	546
21.3	Poly-<i>p</i>-xylylene	547
21.4	Poly(phenylene oxides) and Halogenated Derivatives	548
21.5	Alkyl Substituted Poly(phenylene oxides) including PPO	548
21.5.1	Structure and properties of poly-(2,6-dimethyl-<i>p</i>-phenylene oxide) (PPO)	549
21.5.2	Processing and applications of PPO	551
21.5.3	Blends based in polyphenylene oxides	551
21.5.4	Processing of blends based on PPO	553
21.5.5	Poly(2,6-dibromo-1,4-phenylene oxide)	554
21.6	Polyphenylene Sulphides	554
21.7	Polysulphones	557
21.7.1	Properties and structure of polysulphones	560
21.7.2	General properties of sulphones	560
21.7.3	Processing of polysulphones	561
21.7.4	Applications	562
21.7.5	Blends based on polysulphones	562
21.8	Aromatic Polyether Ketones	563
21.9	Phenoxy Resins	566
21.10	Linear Aromatic Polyesters	567
21.11	Polyhydantoin Resins	569
21.12	Poly(parabanic acids)	570
21.13	Summary	571
22	Cellulose Plastics	572
22.1	Nature and Occurrence of Cellulose	572
22.2	Cellulose Esters	575
22.2.1	Cellulose nitrate	575
22.2.2	Cellulose acetate	579
22.2.3	Other cellulose esters	586
22.3	Cellulose Ethers	588
22.3.1	Ethyl cellulose	588
22.3.2	Miscellaneous ethers	590
22.4	Regenerated Cellulose	591
22.5	Vulcanised Fibre	592
23	Phenolic Resins	594
23.1	Introduction	594
23.2	Raw Materials	594
23.2.1	Phenol	595
23.2.2	Other phenols	597
23.2.3	Aldehydes	598
23.3	Chemical Aspects	598
23.3.1	Novolaks	599

23.3.2	Resols	600
23.3.3	Hardening	600
23.4	Resin Manufacture	602
23.5	Moulding Powders	604
23.5.1	Compounding ingredients	605
23.5.2	Compounding of phenol-formaldehyde moulding compositions	607
23.5.3	Processing characteristics	608
23.5.4	Properties of phenolic mouldings	610
23.5.5	Applications	611
23.6	Phenolic Laminates	613
23.6.1	The properties of phenolic laminates	615
23.6.2	Applications of phenolic laminates	617
23.7	Miscellaneous Applications	617
23.8	Resorcinol-Formaldehyde Adhesives	621
23.9	Friedel-Crafts and Related Polymers	621
23.10	Phenolic Resin Fibres	625
24	Aminoplastics	627
24.1	Introduction	627
24.2	Urea-Formaldehyde Resins	628
24.2.1	Raw materials	628
24.2.2	Theories of resinification	628
24.2.3	U-F moulding materials	630
24.2.4	Adhesives and related uses	636
24.2.5	Foams and firelighters	637
24.2.6	Other applications	638
24.3	Melamine-Formaldehyde Resins	639
24.3.1	Melamine	639
24.3.2	Resinification	641
24.3.3	Moulding powders	642
24.3.4	Laminates containing melamine-formaldehyde resin	646
24.3.5	Miscellaneous applications	647
24.4	Melamine-Phenolic Resins	648
24.5	Aniline-Formaldehyde Resins	648
24.6	Resins Containing Thiourea	650
25	Polyester Resins	652
25.1	Introduction	652
25.2	Unsaturated Polyester Laminating Resins	654
25.2.1	Selection of raw materials	654
25.2.2	Production of resins	659
25.2.3	Curing systems	660
25.2.4	Structure and properties	662
25.2.5	Polyester-glass fibre laminates	663
25.2.6	Water-extended polyesters	665
25.2.7	Allyl resins	666
25.3	Polyester Moulding Compositions	666
25.4	Fibre and Film-forming Polyesters	670
25.5	Poly(ethylene terephthalate) Moulding Materials	677
25.6	Poly(butylene terephthalate)	680
25.7	Poly-(1,4-cyclohexylenedimethylene terephthalate-CO-isophthalate)	682
25.8	Highly Aromatic Linear Polyesters	683
25.8.1	Liquid crystal polyesters	685

25.9	Polyester Thermoplastic Elastomers ,	690
25.10	Poly(pivalolactone)	692
25.11	Polycaprolactones	693
25.12	Surface Coatings, Plasticisers and Rubbers	694
26	Epoxide Resins	697
26.1	Introduction	697
26.2	Preparation of Resins from Bis-phenol A	698
26.3	Curing of Glycidyl Ether Resins	703
26.3.1	Amine hardening systems	705
26.3.2	Acid hardening systems	707
26.3.3	Miscellaneous hardener systems	713
26.3.4	Comparison of hardening systems	713
26.4	Miscellaneous Epoxide Resins	714
26.4.1	Miscellaneous glycidyl ether resins	714
26.4.2	Non-glycidyl ether epoxides	716
26.5	Diluents, Flexibilisers and other Additives	720
26.6	Structure and Properties of Cured Resins	724
26.7	Applications	724
27	Polyurethanes and Polyisocyanurates	729
27.1	Introduction	729
27.2	Isocyanates	730
27.3	Fibres and Crystalline Moulding Compounds	733
27.4	Rubbers	734
27.4.1	Cast polyurethane rubbers	735
27.4.2	Millable gums	738
27.4.3	Properties and applications of cross-linked polyurethane rubbers	739
27.4.4	Thermoplastic polyurethane rubbers and Spandex fibres	740
27.5	Flexible Foams	741
27.5.1	One-shot polyester foams	742
27.5.2	Polyether prepolymers	744
27.5.3	Quasi-prepolymer polyether foams	744
27.5.4	Polyether one-shot foams	745
27.5.5	Properties and applications of flexible foams	748
27.6	Rigid and Semi-rigid Foams	750
27.6.1	Self-skinning foams and the RIM process	752
27.7	Coatings and Adhesives	754
27.8	Polyisocyanurates	754
27.9	Polycarbodi-imide Resins	757
27.10	Polyurethane-Acrylic Blends	757
27.11	Miscellaneous Isocyanate-Based Materials	757
28	Furan Resins	759
28.1	Introduction	759
28.2	Preparation of Intermediates	759
28.3	Resinification	760
28.4	Properties of the Cured Resins	761
28.5	Applications	761
29	Silicones and Other Heat-resisting Polymers	763
29.1	Introduction	763
29.1.1	Nomenclature	764
29.1.2	Nature of chemical bonds containing silicon	765

29.2	Preparation of Intermediates	766
29.2.1	The Grignard method	767
29.2.2	The direct process	768
29.2.3	The olefin addition method	769
29.2.4	Sodium condensation method	769
29.2.5	Rearrangement of organochlorosilanes	769
29.3	General Methods of Preparation and Properties of Silicones	770
29.4	Silicone Fluids	772
29.4.1	Preparation	772
29.4.2	General properties	773
29.4.3	Applications	775
29.5	Silicone Resins	777
29.5.1	Preparation	777
29.5.2	Properties	778
29.5.3	Applications	778
29.6	Silicone Rubbers	781
29.6.1	Dimethylsilicone rubbers	781
29.6.2	Modified polydimethylsiloxane rubbers	781
29.6.3	Compounding	785
29.6.4	Fabrication and cross linking	786
29.6.5	Properties and applications	786
29.6.6	Liquid silicone rubbers	788
29.7	Polymers for use at High Temperatures	788
29.7.1	Fluorine-containing polymers	789
29.7.2	Inorganic polymers	790
29.7.3	Cross-linked organic polymers	794
29.7.4	Linear polymers withp-phenylene groups and other ring structures	794
29.7.5	Ladder polymers and spiro polymers	796
29.7.6	Co-ordination polymers	798
29.7.7	Summary	799
30	Miscellaneous Plastics Materials	801
30.1	Introduction	801
30.2	Casein	801
30.2.1	Chemical nature	802
30.2.2	Isolation of casein from milk	803
30.2.3	Production of casein plastics	804
30.2.4	Properties of casein	806
30.2.5	Applications	807
30.3	Miscellaneous Protein Plastics	808
30.4	Derivatives of Natural Rubber	808
30.5	Gutta Percha and Related Materials	813
30.6	Shellac	815
30.6.1	Occurrence and preparation	815
30.6.2	Chemical composition	816
30.6.3	Properties	817
30.6.4	Applications	818
30.7	Amber	818
30.7.1	Composition and properties	819
30.8	Bituminous Plastics	819
